Page 4: C. ABOUT YOUR CASE STORY

Q4

Title of case story

Port development (Japan)

Q5

Case story focus

Infrastructure upgrading and the development of related services markets, including through support for investment climate reforms.

Q6

Case story abstract

Port development is one of the key factors both for the economic development of the region and its wider integration into the multilateral trading system.

Japan promotes quality infrastructure investment, which ensures economic efficiency in view of life cycle costs, safety, resilience and sustainability, as well as job creation, capacity building, transfer of expertise and know-how.

It is in alignment with economic and development strategies while duly addressing social and environmental concerns.

The followings are the examples of Japan's assistance in the area of port development, which are mentioned in the uploaded video:

- Port, industrial parks, and coastal development in Thilawa, Myanmar, using "Jacket construction method" which enables to shorten the construction period.
- Lach Huyen port in Vietnam, using Japanese ground improvement methods.
- Expansion of the container terminal at Mombasa Port in Kenya, constructed by local workers who received the training in the areas of survey techniques and construction management skills.

Japan will continue to provide comprehensive supports for port development all over the world.
