

STEMMING THE SUPERBUG TIDE IN GERMANY

Resistance proportions for eight antibiotic-bacterium pairs in Germany have decreased in recent years, from 12% in 2005 to 10% in 2015, and could go up to 13% by 2030, should current trends in antibiotic consumption, population and economic growth continue into the future. Resistance proportions in Germany were lower than the OECD average in 2015 (17%).

It is estimated that an average of 2 180 persons die each year in Germany due to infections from eight resistant bacteria. By 2050, an estimated total of 92 300 persons will die due to AMR.

By 2050, health care costs in Germany could reach \$5.3 billion.

Co-funded by the European Union

 Notes: All costs are expressed in United State dollar purchasing power parity (PPP), which eliminates the differences in price levels between countries. The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law. Note by Turkey: The information in this document with reference to "Cyprus" relates to the southern part of the Island. There is no single authority representing both Turkish and Greek Cypriot people on the Island. Turkey recognises the Turkish Republic of Northern Cyprus (TRNC). Until a lasting and equitable solution is found within the context of the United Nations, Turkey shall preserve its position concerning the "Cyprus issue". Note by all the European Union Member States of the OECD and the European Union: The Republic of Cyprus is recognised by all members of the United Nations with the exception of Turkey. The information in this document relates to the area under the effective control of the Government of the Republic of Cyprus.

1. National AMR action plan

Germany has a multi-sectoral plan that reflects Global Action Plan objectives, with an operational plan and monitoring arrangements, in line with what most OECD countries are doing in this area.

2. Stewardship programmes

An antimicrobial stewardship programme is implemented in most health care facilities in line with what most OECD countries are doing in this area.

3. Awareness campaigns

Germany has nationwide awareness-raising campaigns that have been implemented along with monitoring mechanisms, in line with what most OECD countries are doing in this area.

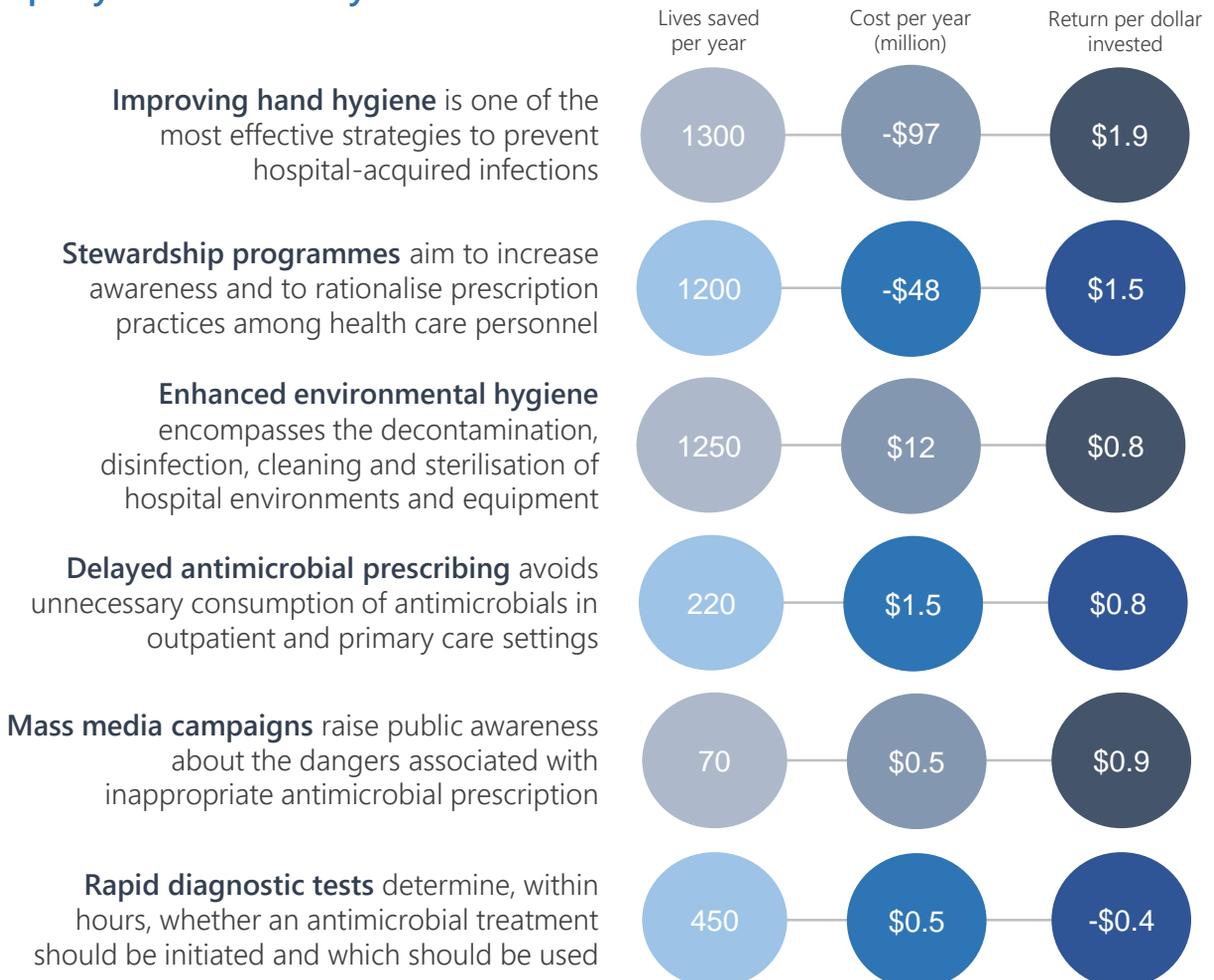

4. Education and training

AMR is incorporated in curricula and continuing medical education for all relevant health cadres in Germany, in line with what most OECD countries are doing in this area.

1 – least developed; 5 – most developed; diamonds indicate OECD mode; country scores in dark blue.

A broad policy package combining stewardship programmes, enhanced environmental hygiene, mass media campaigns, and rapid diagnostic testing could avert 1 500 deaths and save 217 million dollars per year in Germany
