

How to automatically monitor and assess the policy coherence of SDG-related Parliaments' activity?

Peer learning in enhancing PCSD for SDG implementation

November 14th OECD Headquarters

- **Cross-cutting nature of SDGs:** extra-challenge for monitoring, accountability and PCSD implementation of Agenda 2030.
- Agenda 2030 is being implemented through **pre-SDG institutions** and monitored by pre-SDG tools and approaches.
- ‘Parlamento 2030’ is a tool designed to assist governments, parliaments, CSOs and others to **overcome these challenges**.

Parlamento 2030 has three main **added-values**:

- **Builds a database** with the thousands of documents published by National Parliaments (draft legislations, amendments, debates, etc.) [Scraping phase].
- **Labels**, automatically, through a process of ‘masive tagging’ **each political initiative with the SDGs and targets** they are related with [Labelling phase].
- Offers all this information through an open, user-friendly and free-access **online search engine**.

It takes users (Govs, CSOs, media...) **closer to a profound CPD analysis** of the SDG-related political activity. How?

- **Maps interactions of laws with SDGs and targets**

For example: it shows, automatically, that the draft Climate Change bill in Spain is related with 5 SDGs and 21 targets.

- **Detects unforeseen connections and uncoordinated political debates.**

- **It generates a set of automatic metrics and visualizations to answer not-so-obvious questions:**
 - Who are the most active **MPs** for each of the SDGs and targets?
 - Which are the **Committees** where each SDG is mostly discussed in?
 - Are there ‘**whole-of-government**’ issues still being treated as “ODA issues” (HRR responsibilities of TNEs, sustainable models of production and consumption...)?
 - How popular are each of the SDGs in Parliaments compared with each other?

Today, Parlamento 2030 is only **implemented in Spain** (thanks to an Agreement with the Spanish MFA, who has adopted it as **one of the official tools** the Administration will use to monitor and evaluate the implementation of 2030 Agenda).

But, it has been designed to be **easily adapted** and implemented in **other countries and regions**:

- All the code is available on free and open-sourced licenses.
- It has been designed in a modular way.
- Data can be reached directly by machines (free/open API).
