COP21·CMP11

Nationally Determined Contributions
(NDCs)
→ Climate plans

Water resource management plans, which include climate change and variability considerations, will be in place for the country's priority water basins. The 10 priority sectors of the economy (transport, energy, agriculture, housing, health, and trade, tourism and industry) will include climate change considerations in their planning instruments and will be implementing innovative adaptation actions. Strengthening of the awareness, training and public education strategy on climate change, focusing on different subsectors of the Colombian society. The creation of climate change innovation clusters, through the promotion of private investment, public private partnerships and foreign direct investment, with special emphasis on the scientific research and the knowledge and technology transfer.

NDC Activity

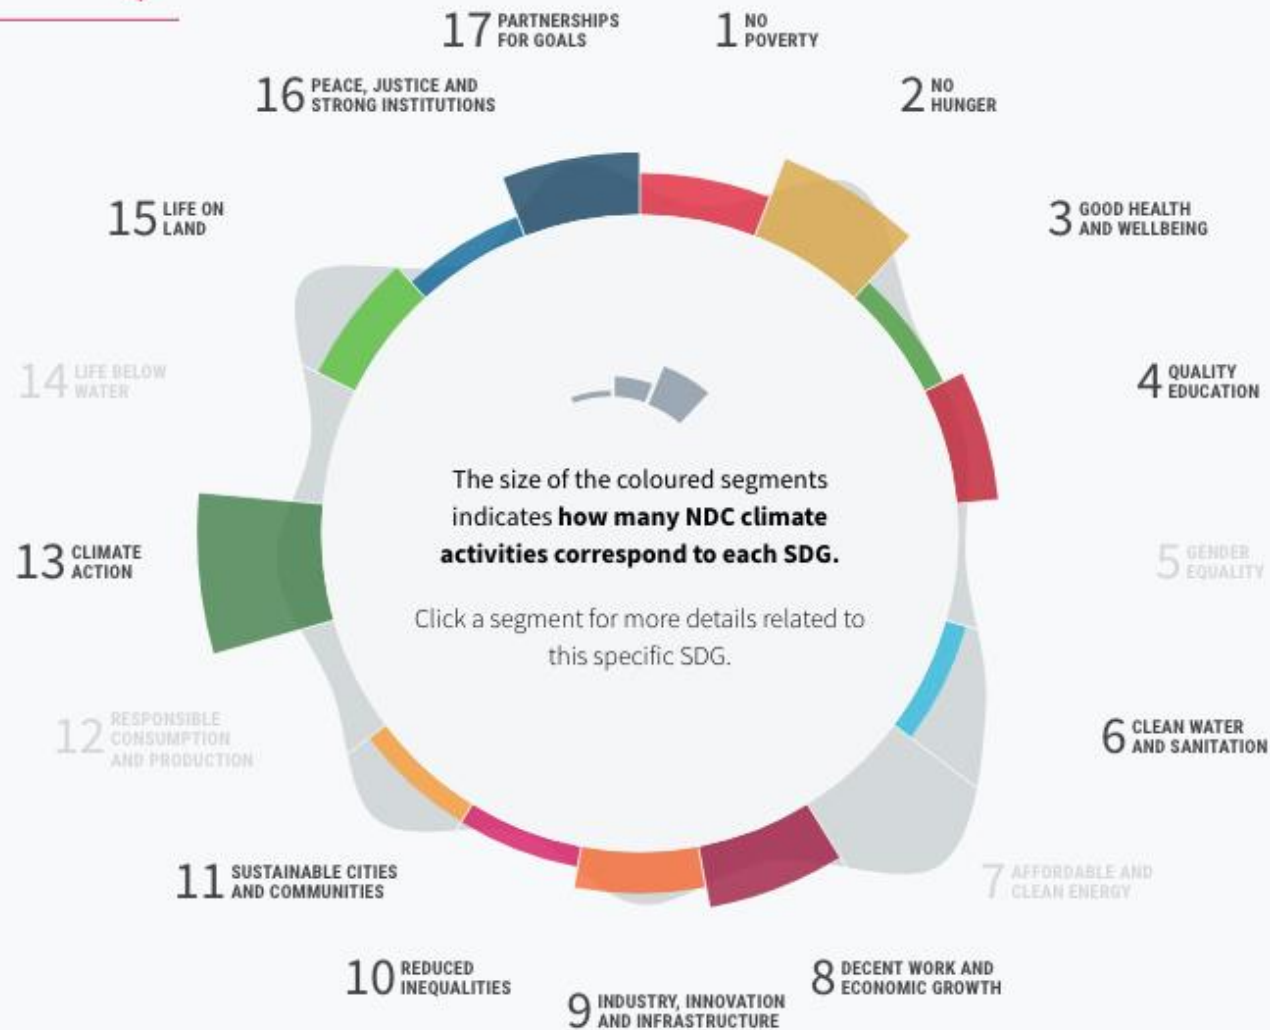

A statement identifying a strand of future activity

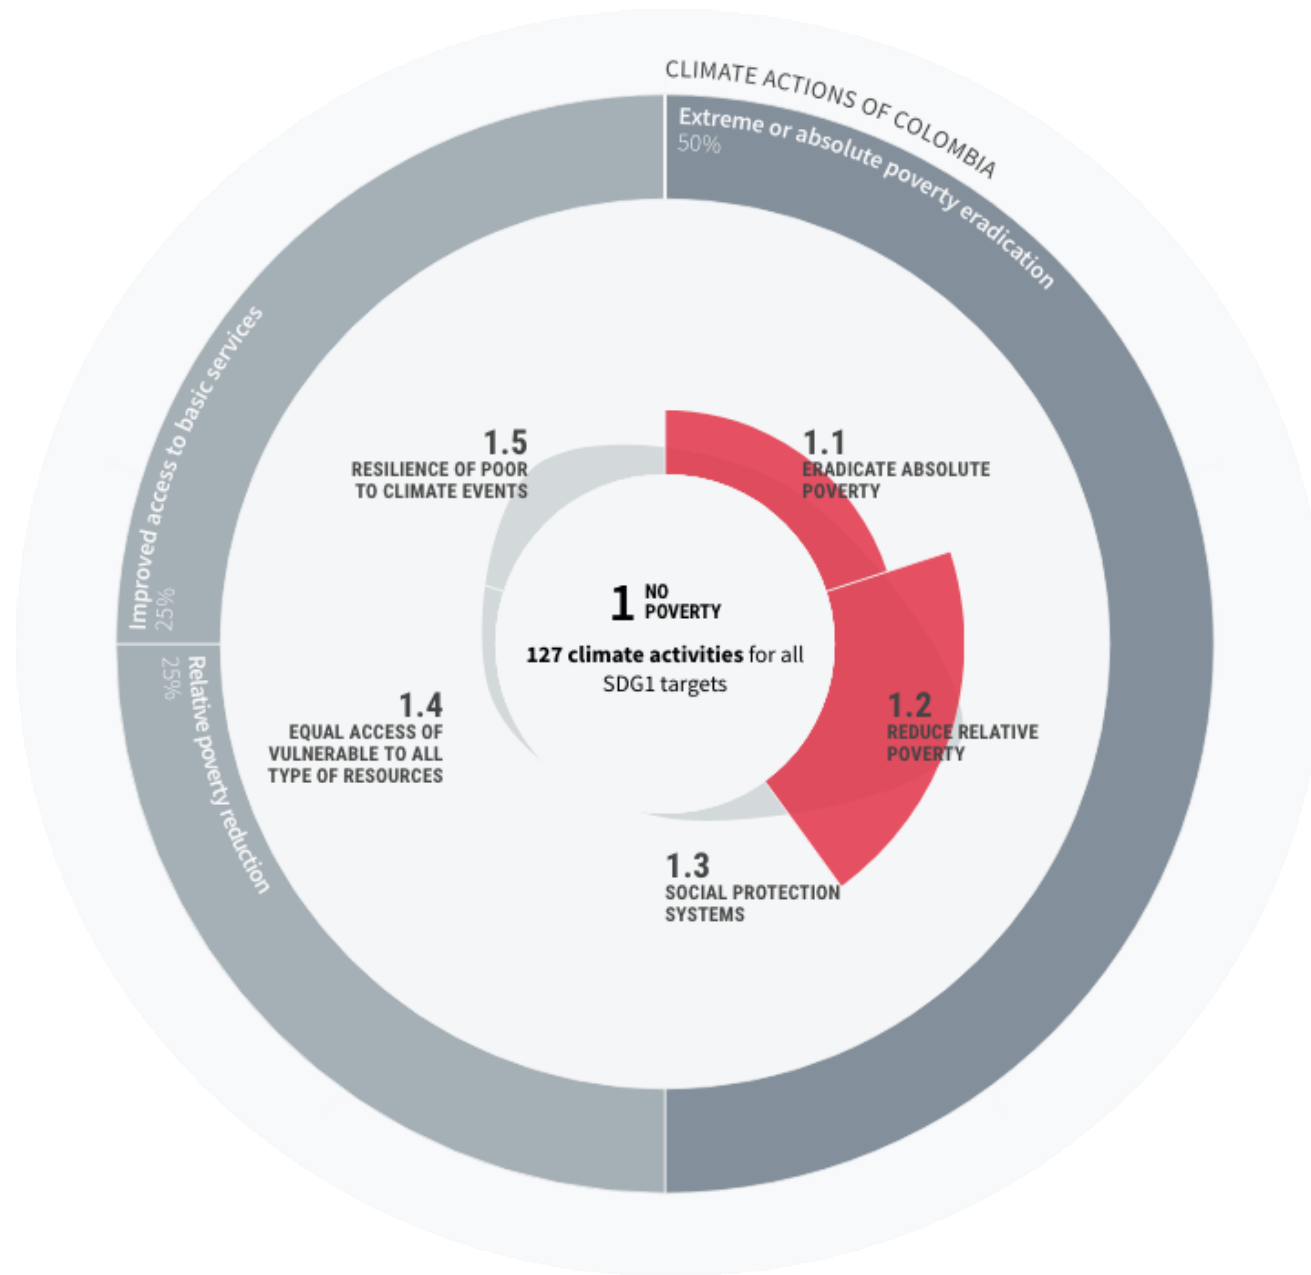

“Water resource management tools, which include climate change and variability considerations, will be in place for the country’s priority water basins.”

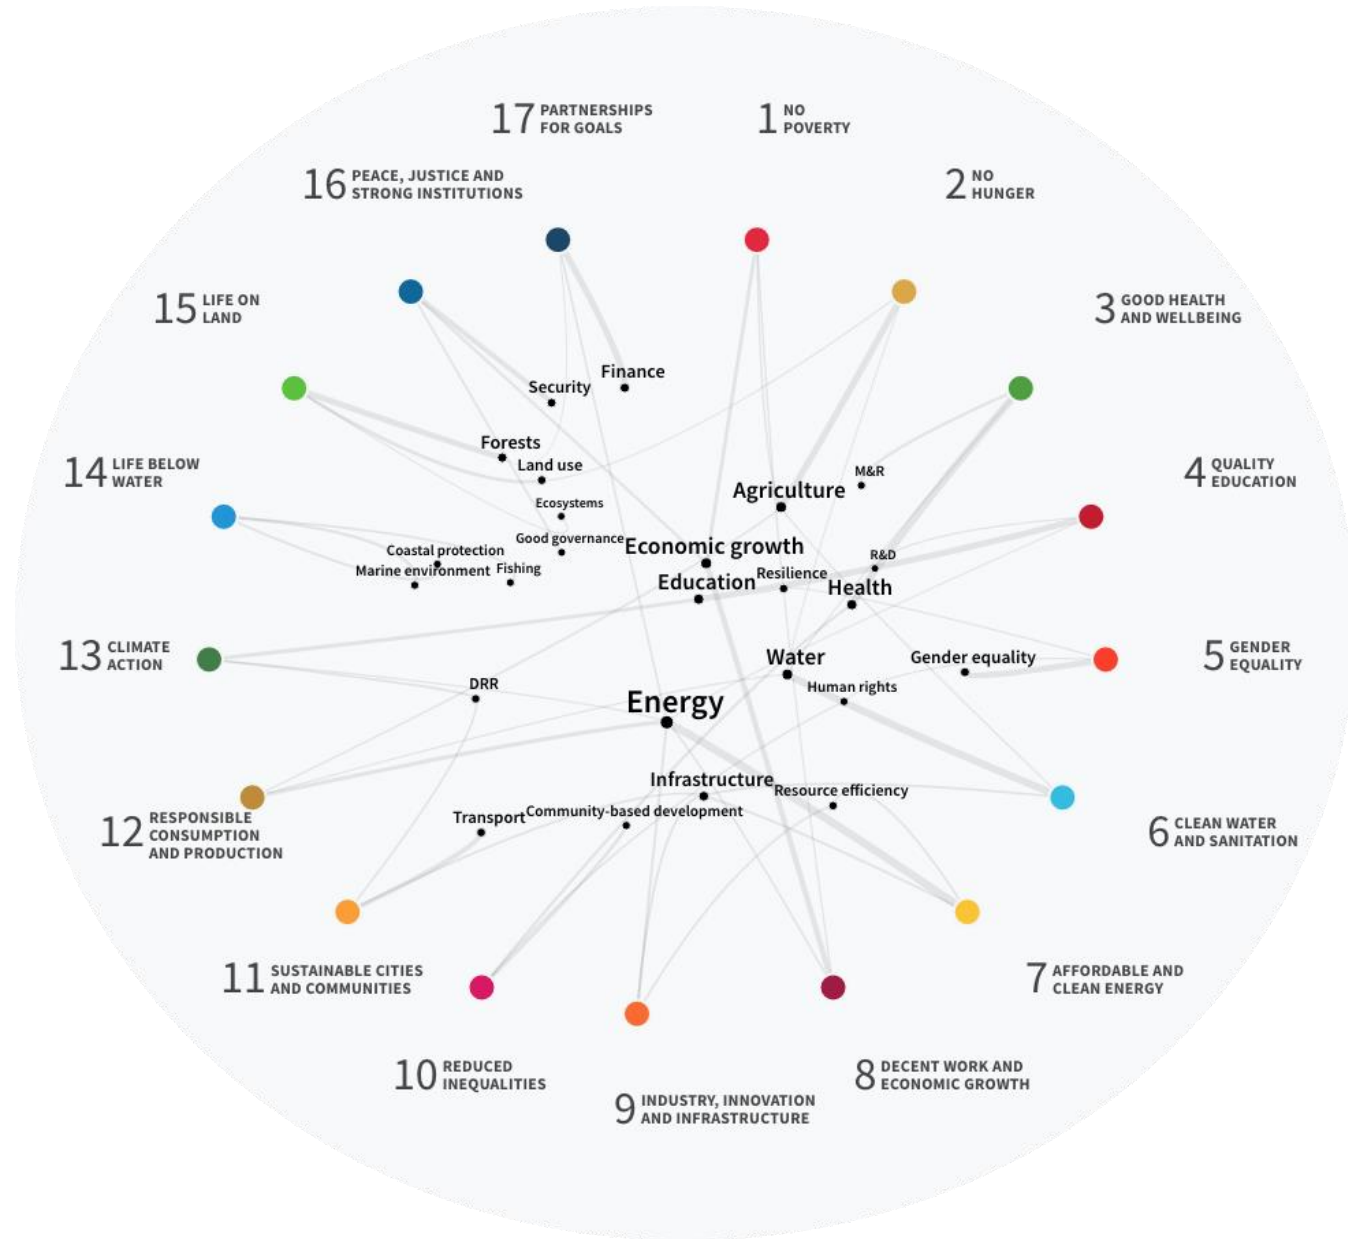

Climate action

Specific area of action within the strand of activity.
