

Administrative trajectories of rejected asylum seekers in France

Tatiana Eremenko (INED / CSIC), tatiana.eremenko@ined.fr

International Forum on Migration Statistics 2018

15-16 January 2018 – OECD, Paris

Context

- 1951: signature of Geneva Convention
- Evolution of asylum system:
 - *Destination countries*: low recognition rates, development of other statuses and greater link with immigration control
 - *Origin countries*: Internally displaced persons and “safe” countries
- Consequences:
 - “break-down” of refugee status
 - persons fleeing their countries and seeking asylum who are NOT recognized as REFUGEES by destination countries

Research objective and methodology of this paper

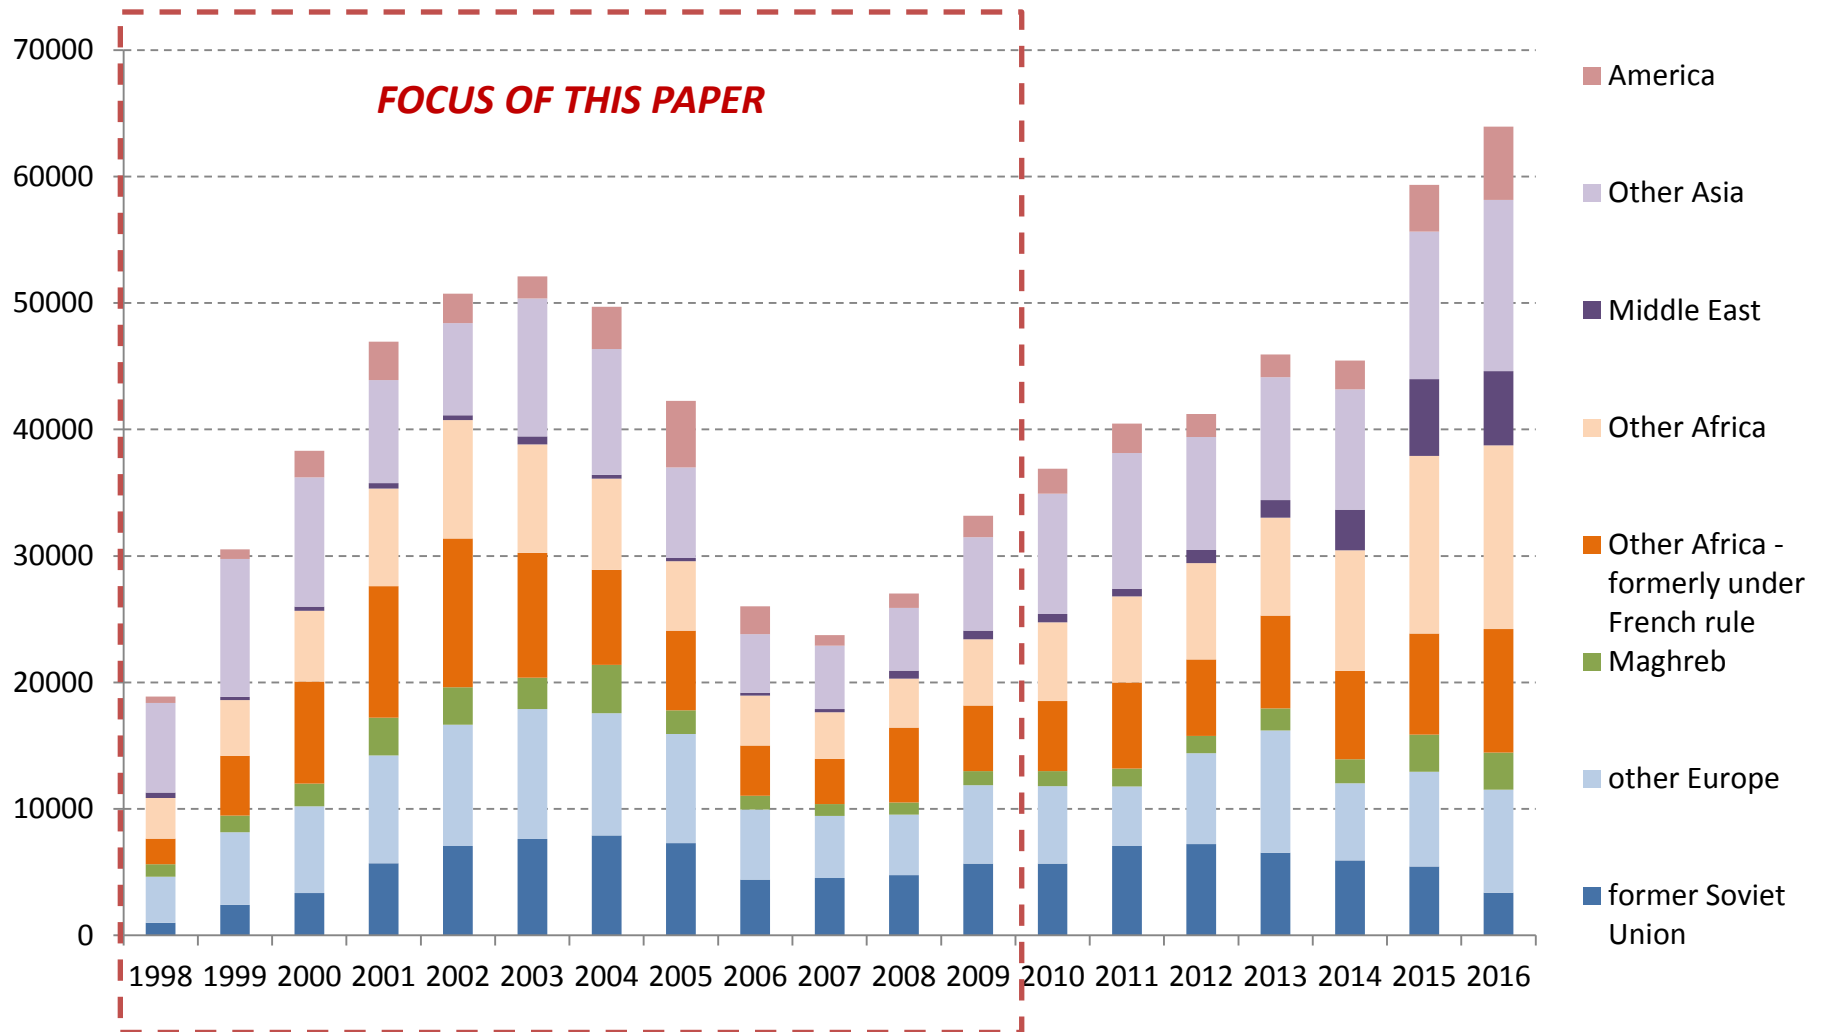

- **Research objective:** understand what becomes of persons who file for asylum
 - How many are recognized as refugees?
 - What becomes of the rejected asylum seekers?
- **Methodology:** combine data on asylum seekers at different stages of administrative trajectories in order to estimate % and timing of legal admission
 - Entries of asylum seekers: OFPRA (aggregate)
 - Admissions to stay: ELIPA (survey)

Asylum system in France

- Signatory of the Geneva Convention
- Law of 25 July 1952:
 - French Office for the Protection of Refugees and Stateless people (OFPRA)
 - Refugee Appeal Commission (CRR)
- Ministry in charge:
 - Until 2007: Foreign Affairs
 - 2007-2010: Ministry of Immigration
 - Since 2010: Ministry of Interior
- Asylum procedures:
 - 1990s: development of territorial asylum (temporary status) processed by prefectures
 - Law of 10 December 2003: all asylum applications are processed by OFPRA
- Recent developments:
 - Law of 20 November 2007: National Court of Asylum (CNDA) (appeal)
 - Law of 25 July 2015: Reception of asylum seekers

First asylum applications, 1998-2016

Administrative trajectories of asylum seekers in France

Arrival in France

Admission to stay

Existing evidence on outcomes of former asylum seekers

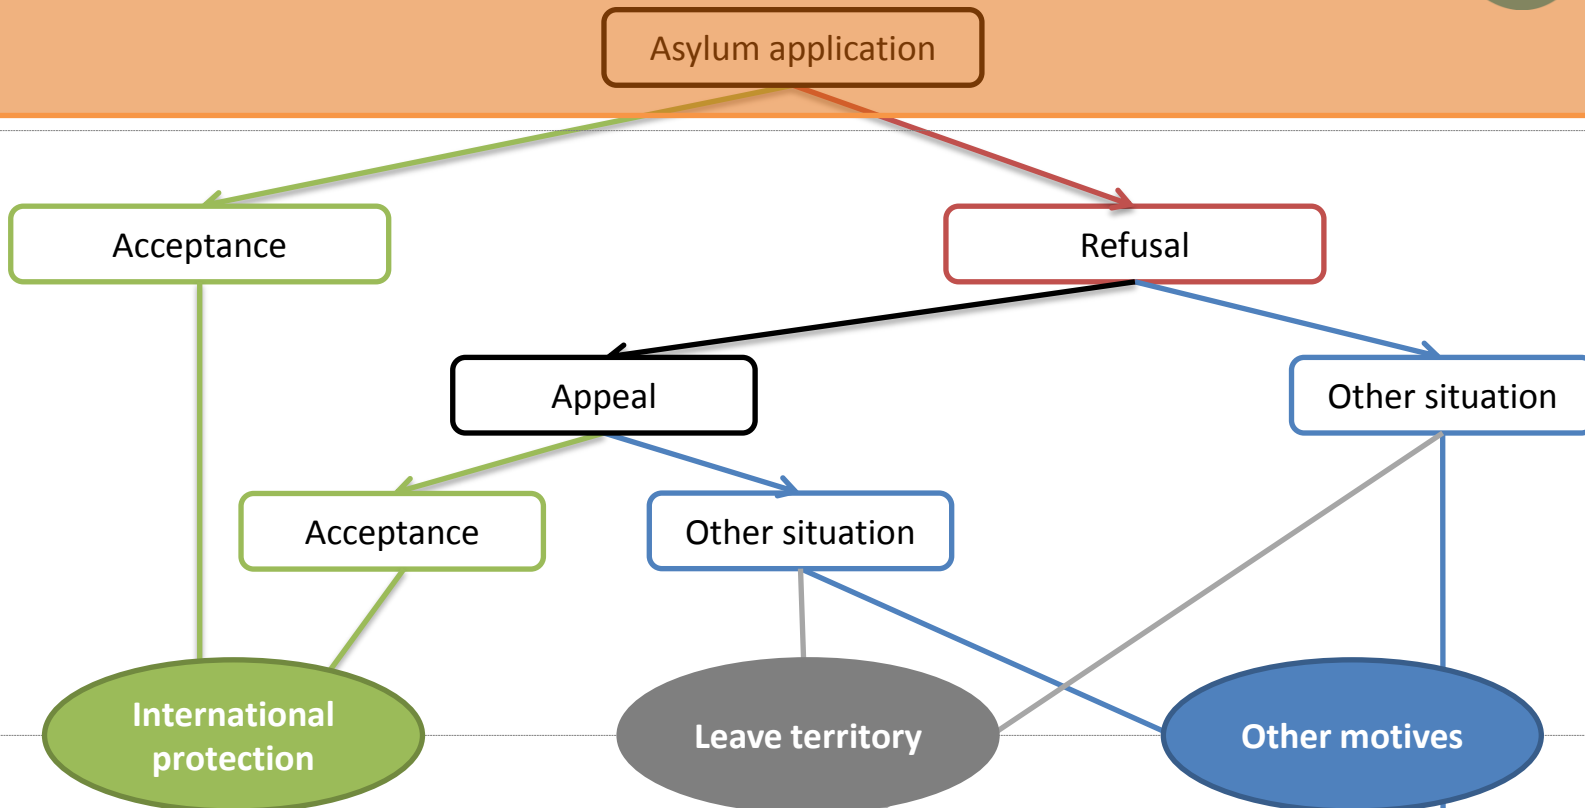

- **Subsidiary protection:** increase of asylum seekers granted temporary protection (*source: Ministry of Interior, metropolitan France, TCN*)
 - 1% of “humanitarian” residence permits in 2003 (out of 11400)
 - 17% of “humanitarian” residence permits in 2015 (out of 15000)
- **Admission to stay for other motives:** among migrants admitted for “permanent” stay in 2009 (around 100 000), 27% had filed an asylum application in France (*source: ELIPA survey, Ministry of Interior*)
 - 11% granted international protection
 - 15% admitted for other motives (work, personal and family ties)
- **Voluntary return programs:** low numbers of participants among former asylum seekers (*source: OFII*)
- **Expulsions of migrants in irregular situation** (*source: report to Parliament*):
 - Concern the most numerous nationalities of migrants in France: Algeria, Morocco, Tunisia, Turkey
 - Asylum seekers are not identified

Data sources

Statistics on first asylum applications (OFPRA)

Arrival in France

Admission to stay

- Refugee / stateless
- Subsidiary protection

Statistics on residence permits

- Voluntary return
- Expulsion
- Onward migration

- Family ties
- Work
- Humanitarian

Longitudinal Survey on Newly Arrived Migrants (ELIPA)

Longitudinal Survey on Newly Arrived Migrants (Elipa)

- Statistical Service of the Directorate General of Foreigners in France (DSED)
- Third-country nationals admitted for “permanent” stay in 2009 (*signature of reception and integration contract, CAI*)
 - 6,107 respondents representative of 97,736 migrants
 - Exclusion of students and some groups of workers
 - Received a residence permit September 2009 – February 2010
- Longitudinal survey with 3 waves (2010 – 2011 – 2013)
 - 1st wave: March – June 2010
- Information on ASYLUM
 - Detailed category of admission: refugee/stateless, subsidiary protection, other (*Source: residence permit database*)
 - Having filed an asylum application / appeal in France (*Source: self-declared*)

Methodology

- **General approach:** combine information on entries (OFPRA) and admissions to stay (ELIPA) of asylum seekers in order to estimate % and timing of legal admission
- **Target population:** adult migrants seeking asylum in France in 1998-2009 (see table)
- **Analyses:**
 - Timing of legal admission to stay: synthetic life table
 - Profiles of asylum seekers admitted in different admission categories

	OFPRA	ELIPA
Identification of asylum applicants	Registered	Self-declared
Cohort	Year of first asylum application	Year of arrival
Adult applicant	-	18 or older at time of arrival
Number of 1° asylum applicants / Sample size	434 097	N obs.: 1 575 N (W): 23 253

Construction of life table (1): estimation of observed rates of admission to stay

Persons admitted to permanent stay (ELIPA)

$$m_x = \frac{\text{Persons admitted to permanent stay}^{2009}}{\text{Number of first asylum applications}_{2009-t}}$$

$$m_3 = \frac{2400}{26268} = 9\%$$

First asylum applications (OFRA)

Construction of life table (2): estimation of life table

x	Rates (mx)	Asylum seekers (Sx)	Admissions to stay (Ex)
0	10	100	10
1	11	90	10
2	14	80	11
3	9	69	6
4	4	63	2
5	3	61	2
6	2	59	1
7	4	58	2
8	6	56	3
9	5	53	3
10	4	50	2
11	2	48	1
12		47	

Construction of life table (3): estimation of types of admission

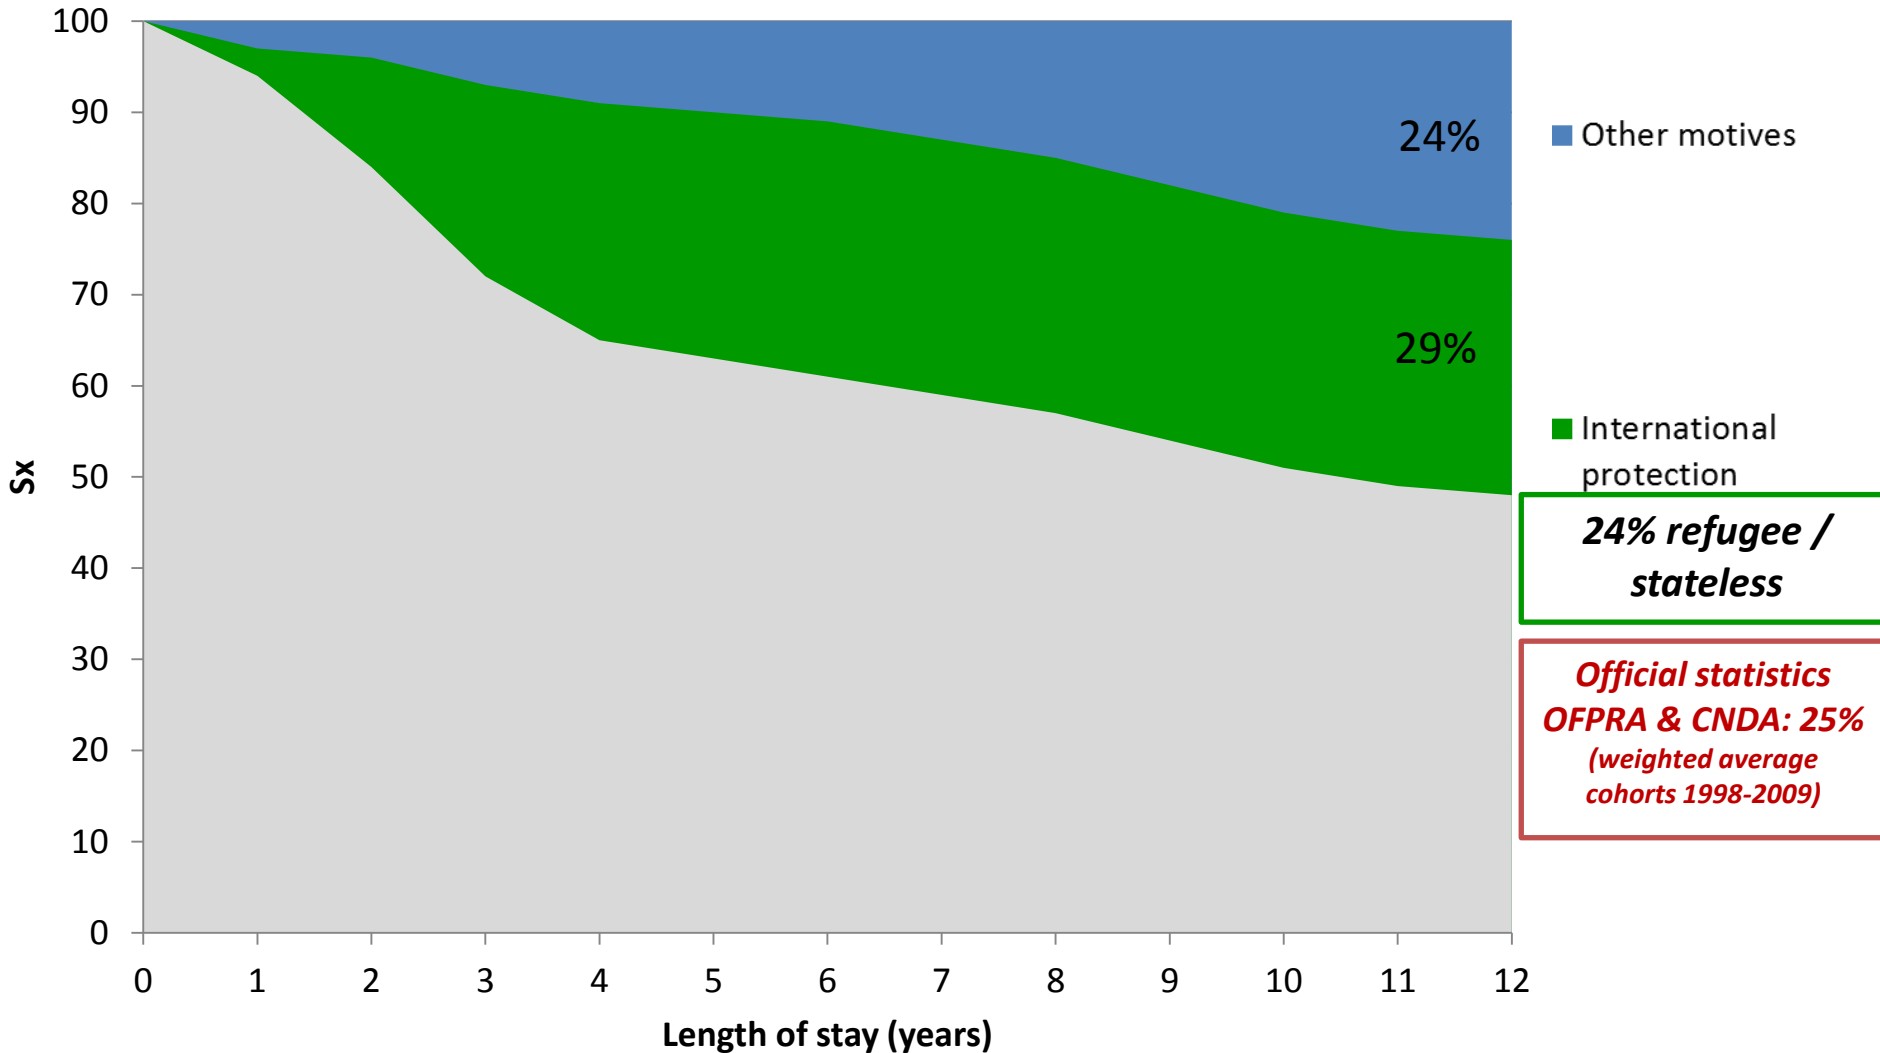

We reassign the estimated number of admissions to stay (Ex) to the two categories:

- **International protection:** refugee / stateless, subsidiary protection
- **Other motives:** family ties, work

using the observed distribution of admissions for each cohort

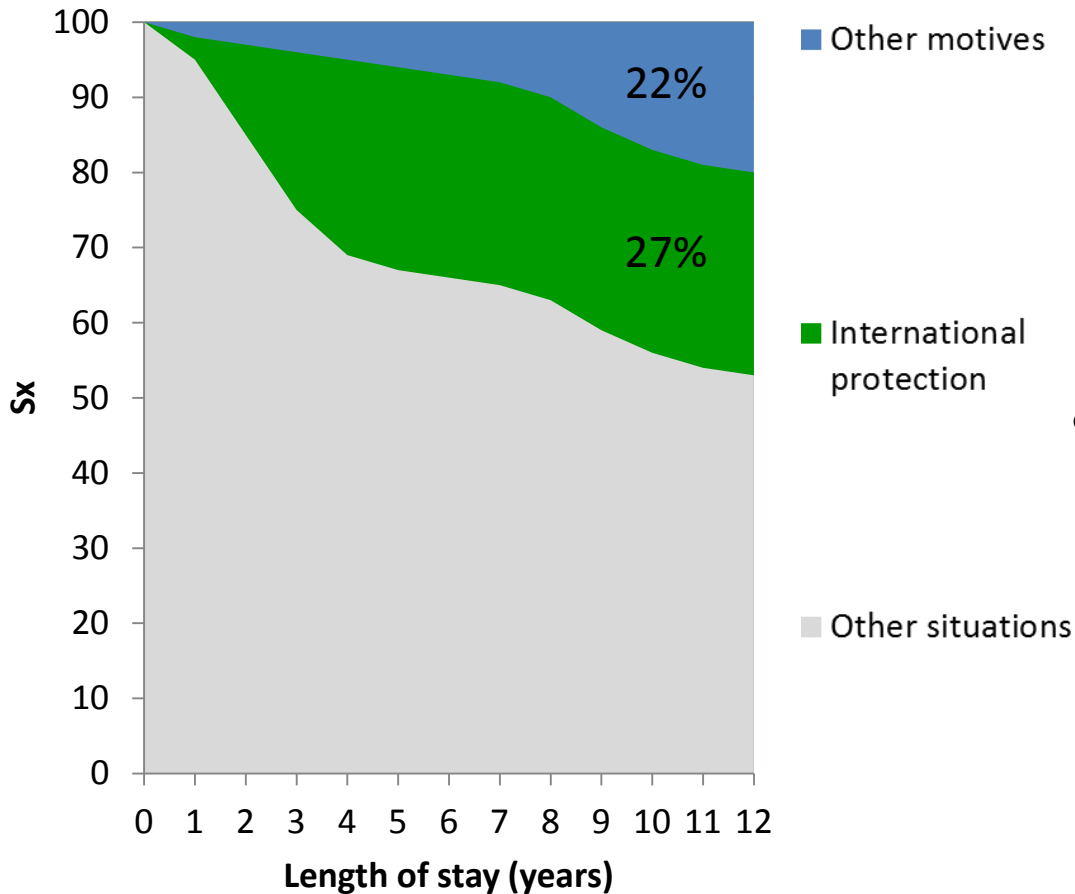

Findings (1): % of asylum seekers admitted to stay

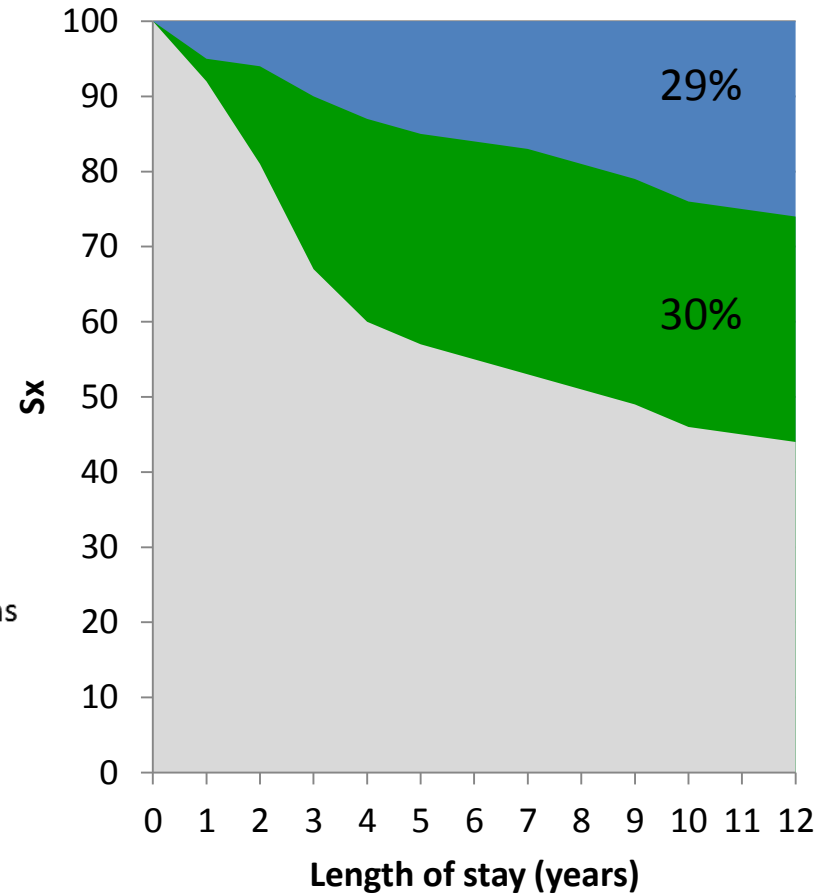

Findings (2): % of asylum seekers admitted to stay by sex

Male

Female

Findings (3): % of asylum seekers admitted to stay by nationality (after 12 years)

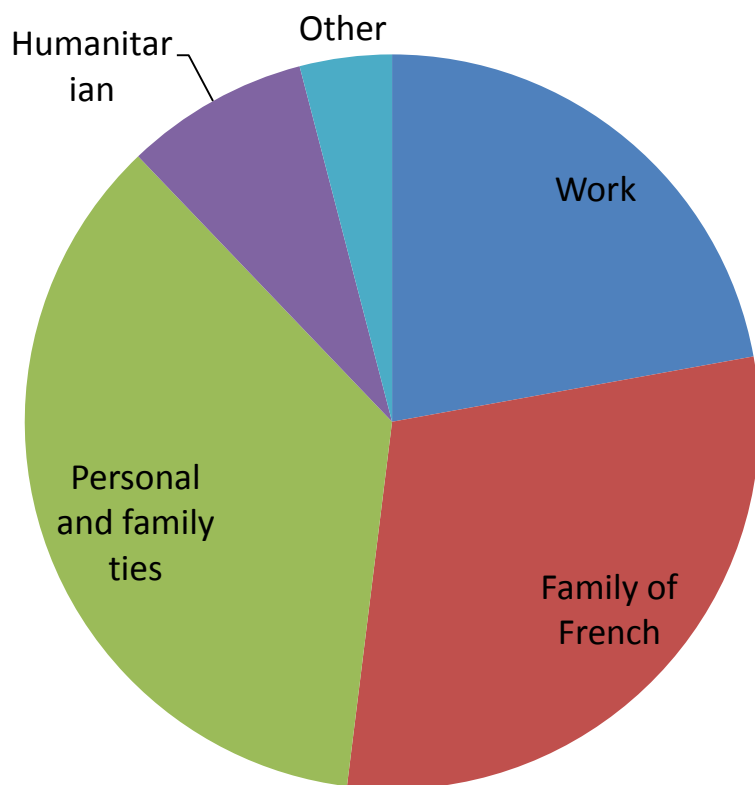

Findings (3): % of asylum seekers admitted to stay by nationality (after 12 years)

Admissions for other motives

Categories of admission

Profiles

- **38% of women:** 14% of workers, 53% among PFT
- **PASAF:** work
- **Maghreb and Europe:** family

Length of stay in France (years)

Discussion (1): outcomes of rejected asylum seekers in France in the 2000s

- Around **¼ of rejected asylum applicants** were admitted to stay for **other motives**, often after many years of residence in the country
 - similar to proportion of asylum applicants having received international protection
- For the **largest proportion of asylum applicants** we don't know their situation from existing data sources: left territory? Remained in irregular situation?
- Contribution of a **demographic approach**: taking into account different cohort sizes, length of stay in destination country
- **Categorization of migrants and refugees**: persons go through a number of stages in their migration / asylum process and are categorized differently
 - Do not simply adopt bureaucratic labels
 - Importance of a life-course approach
- Broader implications: **understanding the migration / integration process**
 - 'Years since migration'

Discussion (2): data issues

Integration of multiple data sources: administrative data and surveys

- Depends on research questions, availability and accessibility of data sources
- Macro *versus* micro approach

MACRO approach (this paper):

- Principal issue: definition / identification of a comparable target group
- Limitations :
 - Gap between year of arrival and year of first asylum application -> problems for specific groups
- Possible improvements:
 - include more detailed information on asylum application (yes/no and year) in statistical surveys
 - distinguish former asylum seekers and others among persons in published statistics (for example removals from territory)

MICRO approach (individual level):

- Exists in some countries, being implemented in others
- Accessibility to administrative data (residence permits, data sources of administrations in charge of asylum seekers)

Thank you for your attention !
