

# MEASURING IMMIGRATION FROM NORTH AMERICA AND THE NTCA IN MEXICO: ADVANTAGES AND DATA LIMITATIONS

Carla Pederzini, Universidad Iberoamericana  
Silvia Giorguli, El Colegio de México

# BACKGROUND

- Over 90% of Mexico's outmigration goes to US. Hence, it is easy to complement data sources on both sides to understand changes in the flow.
- Similarly, 73% of immigrants in Mexico (EIC 2015) come from the US.
  - Children of former Mexican migrants, born in the US who return with their parents, an emerging phenomenon, explains most of the high participation of US born on Mexican immigration.
- Return migration has been constant in the mobility between Mexico and US. It is necessary to consider it, in order to get the whole picture of the migration flows. Mexican data sources, including Census data, are the best way to capture it.

# DATA SOURCES FOR IMMIGRATION IN MEXICO

- **Population Census:**
  - Basic questionnaire (Universal)
  - Extended questionnaire (Large samples- 1990, 2000, 2010)
- **Surveys** (on income, demographics and health, labor, among others)
  - Household Surveys (ENADID, EIC2015)
  - Flow Surveys (EMIF)
- **Administrative Records** (from the International Migration Institute)

# MEXICAN POPULATION CENSUS

- Population Censuses have been carried out since 1895. (Every ten years since 1900 with the exception of 1920)
- Important questions to measure immigration (basic questionnaire):
  - place of birth (since 1895)
  - residence 5 years prior to the Census (since 1990)
- Universal ∴ suitable to measure characteristics of immigrant population and return migrants (5 years):
  - Accumulated volume
  - Detailed geographical distribution
  - Sociodemographic characteristics
  - Labor characteristics

# MEXICAN POPULATION CENSUSES FOR IMMIGRATION ANALYSIS

## BASIC QUESTIONNAIRE

### Advantages

UNIVERSAL

Place of Birth and Residence 5 years before

Geographical Distribution, Socioeconomic and labor characteristics

Other indirect measures: remittances

### Limitations

Limited access to microdata

No year of arrival

No Residence 1 year before

## EXTENDED QUESTIONNAIRE

### Advantages

Large SAMPLE information

Microdata available: link to other variables and other HH members information

Information on migrants absent from the HH

POB of co-resident parents

### Limitations

Not necessarily constant

Changes from one census to the other (f.e. on causes of migration)

Little or no information on migration experience (duration, occupation, etc)

No ancestry beyond co-resident parents

# HOUSEHOLD SURVEYS

Generally, small sample size makes household surveys not reliable sources for counting the volume of foreign population since their sample is not big enough.

- **ENADID (Demographic Dynamics National Survey)**  
Sample size: 101 389 dwellings in 2014
  - Representative at the national level, state level and for urban and rural populations
  - Includes information of place of residence five years and one year before survey completion.
- **ENCUESTA INTERCENSAL 2015 (EIC 2015)** with a sample of 6 million dwellings and representative at the municipality level, is suitable for estimation of total migrant population.
  - Contains information on place of birth and citizenship.

Source: Masferrer y Pederzini, 2017.

# FLOW SURVEYS

## EMIF (Border International Migratio Survey)

- Northern Border (EMIF NORTE) (since 1999)
- Southern Border (EMIF SUR) (since 2004)

(Representative of anual and quarterly flows)

The Southern Border EMIF contributes to the understanding of:

Southern Border flows from Guatemala, El Salvador and Honduras

# ADMINISTRATIVE REGISTRIES

- Information of documented foreign population in Mexico collected by INM (National Migration Institute) for temporary or permanent residence
- Basic demographic profiles and geographic distribution
- Information on reason for migration
- No information on US or Canadian citizens with shared residency.
- No public anonymous databases (microdata)
- Limited indicators
- Probably large undercount for certain populations

# STATISTICS FROM ADMINISTRATIVE REGISTRIES

## FOREIGN RESIDENTS

### INFLOWS BY NATIONALITY (THOUSANDS)

	2009	2010	2011	2012	2013	2014	2015

# RECOMMENDATIONS

- **Where measurement improvement is required?**
  - Outflows
  - Return migration (voluntary and forced)
  - Immigration flows
  - In transit migration
  - Characteristics of migrants, HHs and communities with high migration prevalence.
  - **CHANGES AND TRENDS IN TIME**
  
- **What are we missing?**
  - Continuity on special section on migration (Census data and HH surveys)
  - Linkage of migration and places of destination to processes with geographical disaggregated information:
    - violence
    - environmental events
  - Information on move characteristics (reasons for migrating)

# RECOMMENDATIONS

## **General Challenges for Mexican data sources:**

- Keep a basic set of questions on all surveys and census - including data on remittances.
- Complement with administrative records : schools, health records, vital statistics.
- Gauge emigration undercount due to complete HH absence and selectivity
- Use of panel and retrospective data to study:
  - Transnational HHs
  - Movements below 5 years.
- Gather information on absent members of HHs.
- Analyze and improve complementarity with US data sources.

## **Challenges for Immigration Data:**

- Information on last place of residence or place of residence one year before.
- Improve quality, reliability and accessibility of administrative records
- Study flows using different methodologies
- Information on citizenship
