

# Please tell us which sector/organisation you work for

# How would you describe the maturity of fintech for clean energy finance in your jurisdiction?

# What do you see as the leading driver for Fintech development in the clean energy sector?

# Do you agree that Fintech options are suitable for the following clean energy technologies?

# What proposals would you make for future IEA and OECD analysis on Fintech and clean energy development?

Visibility funding for renewable energy on site

Case studies, success stories

current key challenges and barriers to scaling Fintech in clean energy what kind of issues would Fintech solve compared to traditional finance case studies from developed and emerging markets - lessons learnt and success factors

Energy efficiency and ESCOs /energy services/ - how to support the enlargement of the guaranteed energy services sector to larger number of clients

I think related to the habits in the implementation of the analysis program and other impacts that arise in the implementation

- the development of tailored "Sandbox" environment for Green Fintechs; - access to finance/green finance and opportunities given by blockchain ( digital ID, traceable transactions, project accountability and transparency)

How to involve ordinary people/financing into fintech. The term/solution is still not understandable for many

Policy for addressing lower ticket projects and simple procedures

Energy Efficiency and ESCOs

# What proposals would you make for future IEA and OECD analysis on Fintech and clean energy development?

How to "green" more consumer behaviours through Fintech

Including more participant from Africa, Latin America where potential huge

There should be more information about Fintech work/activities especially in the developing countries.

Innovative models which can make MSMEs find this attractive especially in developing countries

A process is needed to bring common people on to Fintech. Safety of platforms need to be ensured and reinforced.

Innovative financial mechanisms for MSMEs in developing countries, understanding market gaps and ways to accelerate EE with digitalisation.

how bureaucracy and procedures, in either public and private sector, could be "avoided" in its sides of burdening e slowing procedures, and how could same bureaucracy could better assure privacy and transparency

How about innovate and develop about MSMEs crowdfunding?

Which part that of life fintech could start to lead shifting society behavior to more green-oriented customer

# What proposals would you make for future IEA and OECD analysis on Fintech and clean energy development?

Its impact to the carbon emission

Delivering Green Growth for a Government

Can you give an idea of the order of magnitudes and additionality of impact you expect from fintech rollout, eg: green bond yield spreads vs. normal bonds, additional capital mobilized for renewables investment.

To share more cases studies of Fintech energy development

i would to make a proper analysis so it can be used for anyone
