Database documentation

Foreword

This document describes the OECD Economic Outlook database – 114th edition – Volume 2023/2.

Section 1 describes the content of the database and gives some information on how data have been compiled and how they can be accessed. Section 2 focuses on the main changes implemented in the last edition of the Economic Outlook database.

Summary tables, codes and formulas have been grouped at the end of this document (annexes) to form a practical user's guide.

More detailed information - notably on Sources and Methods - can be found online in the OECD Economic Outlook website. The latter should be considered as an important complement to this document:

<https://www.oecd.org/eco/outlook/economicoutlook.htm>

OECD Data Explorer : a new platform for OECD data

This edition of the OECD Economic Outlook (EO) uses the OECD.Stat data dissemination platform for the last time.

The next edition will use a new data dissemination platform : OECD Data Explorer, which we invite you to discover at the following address: <https://data-explorer.oecd.org/>

Data from the latest editions of the Economic Outlook will be uploaded to this new platform well before the launch of the next EO so that users can adapt their programs.

1. DESCRIPTION OF THE ECONOMIC OUTLOOK DATABASE

1.1. The Economic Outlook publication

The OECD Economic Outlook (EO) publication presents the OECD's twice-yearly analysis of the major economic trends and prospects for the next two years.

Prepared by the OECD Economics Department, the Outlook puts forward a consistent set of projections for all OECD member countries as well as for selected non-member countries.

Most data presented in the OECD Economic Outlook publication (and more specifically in the statistical annex) are available in the EO database

1.2. The Economic Outlook database

1.2.1. Countries and country groupings (at 23 November 2023)

The Economic Outlook (EO) database includes a comprehensive and consistent set of macroeconomic data for the 38 OECD countries and 11 non-OECD countries (Argentina, Brazil, Bulgaria, China, Croatia, India, Indonesia, Peru, Romania, Russia and South Africa).

Data are also available for two major country groupings: total OECD which includes the 38 member countries and the OECD euro area (17 countries that are both members of the OECD and the euro area: Austria, Belgium, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Latvia, Lithuania, Luxembourg, Netherlands, Portugal, Slovak Republic, Slovenia and Spain).

Some data related to non-OECD trade regions are also available in the database.

- ➔ [Annex 1 - Table A1-1: Country codes](#)
- ➔ [Annex 6 - Country groupings and aggregates](#)

1.2.2. Variables

New variables:

- BSIIQ: Balance of primary income, as a percentage of GDP
- NTRQ: Balance of secondary income, as a percentage of GDP
- FBGSQ: Net exports of goods and services, as a percentage of GDP

For OECD countries, the Economic Outlook database includes data on expenditure, foreign trade, output, employment and unemployment, interest and exchange rates, balance of payments, outlays and revenues of government and of households, government debt, supply and fiscal indicators.

For non-OECD countries and non-OECD trade regions, only a subset of key national accounts variables, foreign trade indicators and current account series are available.

- ➔ [Annex 1 - Table A1.2: Variable codes](#)
- ➔ [Annex 2 – The economic blocks which form the EO database](#)

1.2.3. Series' codes used in the Economic Outlook statistical annex

The statistical annex has been revised. Tables have been renumbered accordingly

➔ [Annex 1 - Table A1-3: Codes of variables presented in the Economic Outlook statistical annex](#)

1.2.4. Frequency, annualisation and seasonal adjustment

The EO database contains yearly and quarterly data (when relevant) over the historical and projection periods, for OECD countries, non-OECD countries and OECD country groupings.

Quarterly levels are annualised (i.e. multiplied by 4). Annual levels are derived by averaging annualised quarterly levels.

Preference is given to seasonal adjustments performed by countries. However when adjusted data are not available, seasonal adjustments are performed by the OECD.

OECD quarterly projections are on a seasonally adjusted and working-day-corrected basis for selected key variables. Annual figures are obtained by averaging the quarters, thereby implying that differences between adjusted and unadjusted annual data may occur, though these in general are quite small. In some countries, official forecasts of annual figures do not include working-day correction. Even when official forecasts do adjust for working days, the size of the adjustment may in some cases differ from that used by the OECD.

1.2.5. Scale, units, currency and base years

Constant prices (volume) and current prices data (nominal values) are expressed in units (they are not in thousands, millions or billions).

Most data are expressed at local currency, sometimes also in US dollars. For country aggregates, different rules apply. See [Annex 4](#) for more information.

For almost all countries, data at constant prices are “chained” volume data.

● **For most variables at constant prices (volume), base years (or reference years) are specific to each country.**

Labour force data are expressed as number of persons.

Prices and indices are based on 100. Like volume data, they vary as to base year depending on national conventions.

Prices and indices related to the external sector (balance of payments and trade) are based on 2015=100.

Some aggregates and indicators are in index form with 2015=1.

The information is usually given in the “unit” column in OECD.stat and in the series' labels.

➔ [Annex 3 - Table A3-2: Reference years](#)

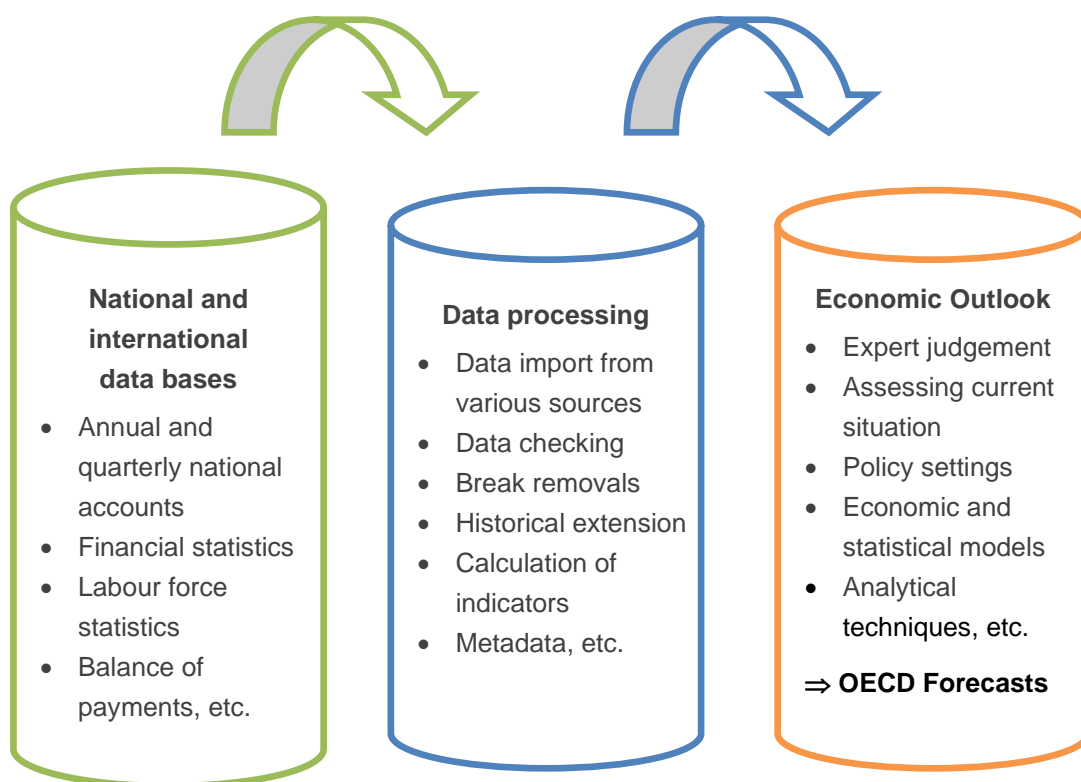

➔ [Annex 3 - Table A3-3: National currencies](#)

1.2.6. Data processing

Variables are defined in such a way that they are as homogeneous as possible across countries. Breaks in underlying series are corrected where feasible.

The following treatments are applied to national data as required:

- **Back-splicing of data:** for a number of countries, some historical data have been estimated by the OECD Economics Department; if countries revise their methodologies but only supply revised data for recent years, the historical data are estimated by mechanically linking the new and old series. Prior to the first year for which actual historical data are available, data have been spliced backward using the growth rates from the previous series.
- **Calculation of chained volume measures:** a common computation of chained volume measures, which may differ from national methodologies, has been introduced over the forecast period for most countries and the level of a particular volume aggregate is thus no longer the simple summation of the level of its components. Contributions to changes in real gross domestic product (GDP), shown in the OECD Economic Outlook Annex table, but not included in the database release, have been based on a Laspeyres chain-type aggregation: the stock building contribution is computed as the weighted difference between the growth of real gross capital formation (investment including changes in inventories) and the growth of real gross fixed capital formation (investment excluding changes in inventories), the weights reflect the share of the different components of GDP at current prices in the previous period; similarly, the net trade contribution is computed as the weighted difference between the growth of real exports and the growth of real imports, the weights reflect the share of the different components in GDP at current prices in the previous period.

1.3. Economic Outlook Sources and Methods

1.3.1. Online Sources and Methods

The Economic Outlook Sources and Methods are described on the OECD Economic Outlook website:

<https://www.oecd.org/economy/outlook>

Statistical Annex>Sources & Methods of the OECD Economic Outlook

Direct link: <https://www.oecd.org/economy/sources-and-methods.htm>

Online material includes detailed information on:

- Key facts about the OECD Economic Outlook
- Forecasting methods and analytical tools
- Economic policies and other assumptions
- Aggregation methods
- References and more...

1.3.2. General assessment of the macroeconomic situation

The policy and other assumptions underlying the projections are described in the “General Assessment of the Macroeconomic Situation”, which is available on the OECD website:

<https://www.oecd.org/economy/outlook>

1.3.3. Frequently Asked Questions (FAQs)

Some of the frequently asked questions are listed on the OECD Economic Outlook website. For example:

- When is the Economic Outlook database updated?
- How can I access previous editions?
- How are growth rates calculated?
- Are the series final, preliminary or projected? What are the last historical points?
- What are the differences between the SNA08 and Maastricht definitions of government financial liabilities?
- Why do OECD data for gross financial liabilities differ from IMF estimates?
- How are country-groupings, such as the euro area, computed?
- What is the difference between Revenue Statistics and the SNA government revenues?
- What is the difference between public debt and government financial liabilities?

Answers to these questions are given on the OECD Economic Outlook website:

<https://www.oecd.org/economy/outlook>

Statistical Annex>Frequently asked questions (FAQs)

Direct link: <https://www.oecd.org/economy/outlook/faqs.htm>

1.3.4. Main sources

Sources for historical data (i.e. excluding projections) are publications of national statistical agencies and OECD statistical databases such as the *OECD Quarterly National Accounts*, *OECD Annual National Accounts*, *OECD Annual Labour Force Statistics*, and *OECD Main Economic Indicators* (prices, interest rates, balance of payments, quarterly labour force statistics, etc.).

More information on sources and methods by country is available on line on the OECD Economic Outlook website:

<https://www.oecd.org/economy/sources-and-methods.htm>

1.3.5. Identities

Many variables in the Economic Outlook database are calculated or re-calculated by formulas. These formulas – or identities – have been established to ensure the consistency of projections.

Definitions of variables and the relations between variables are presented by mathematical expressions between variable codes in [Annex 4](#). These expressions are identities and hold therefore exactly. Not presented are behavioural relations between variables and other non-identities.

The identities are shown at a quarterly level. Some identities are slightly different on an annual level.

Most identities are identical for all OECD countries.

The base year (or reference year) is relevant for some identities. There are two kinds of base years:

- Country specific base years, relevant for volume and price series for expenditure and GDP (see [Table A3.2](#) for current base year). These base years are presented in the identities as “base year”.
- A non-country specific base year, relevant for trade series and other series comparable over countries. This base year is 2015 in the current database and is presented in the identities as “overall OECD base year”.

1.4. Where to find the data? What are the different electronic formats?

1.4.1. OECD.Stat

The Economic Outlook database is available via OECD iLibrary or OECD.stat (“OECDdotStat” is the OECD official data warehouse).

https://www.oecd-ilibrary.org/economics/data/oecd-economic-outlook-statistics-and-projections_eo-data-en

<https://stats.oecd.org/Index.aspx?DataSetCode=EO>

In OECD.Stat, under the theme “Economic Projections”, select “OECD Economic Outlook”.

From issue n 60, data can be extracted in the different formats proposed by the browser. For technical reasons, issues up to 59 are available only as pdf files, or as zipped Excel files.

Structure of the Economic Outlook database in OECD.Stat

Data are presented according to three dimensions: Country, Variable and Time & Frequency. Since OECD Economic Outlook 83, more than 200 variables are implicitly presented in ten different economic blocks, which appear in the following order:

- EXT: External sectors, trade and payments
- GOV: Government accounts
- EXP: Expenditure and GDP
- SEL: Selected variables: ready-made growth rates
- SUP: Supply block
- HOU: Household sector accounts
- PRI: Prices and deflators
- LAB: Labour market
- MON: Monetary data
- OIL: Oil and commodities

[Annex 2](#) presents a detailed description of each block.

Exceptionally for Economic Outlook 107, two datasets are available for different economic scenarios. Only a limited number of series is available in these datasets.

The screenshot shows the OECD.StatExtracts interface. The main content area displays a table for 'Economic Outlook' with the variable 'GDPV_ANNPCT: GDP growth (volume)'. The table is organized by Country, Frequency (Annual), and Time (2002-2011). The left sidebar shows a navigation menu with categories like 'General Statistics', 'Agriculture and Fisheries', 'Demography and Population', 'Development', and 'Economic Projections'. The top navigation bar includes 'Login', 'Version française', 'Contact us', 'User Guide', and 'Home'.

1.4.2. Excel files

The Economic Outlook statistical annex is also available in Excel format. However, only broad indicators are available (i.e. growth rates, ratios, indices...). Input series used to calculate these indicators are only available in OECD.stat.

<https://www.oecd.org/economy/outlook/statistical-annex>

1.4.3. Export to Excel and other formats (CSV, XML...)

Data selection in OECD.stat can be exported to Excel, CSV, PC-axis and XML.

1.5. Recommended uses

The following points should be borne in mind when using the EO data:

- Depending on the countries and variables, data are shown from 1960 onwards, however users should be aware that most of the long time series are constructed using different vintages of data and older information is subject to caution.
- Historical data correspond to the data available at the cut-off date for the respective Economic Outlook, and may diverge from data present in other OECD data sets which are updated on a rolling basis.
- The list of variables may differ from one edition to the next, following changes in concepts and suppression/addition of indicators.
- Publication of variables (mainly on a quarterly basis) is subject to a quality review for each issue and may be provisionally suspended.

2. MAIN CHANGES TO THE DATABASE

2.1. Date of last update

The cut-off date for information used in the current Economic Outlook database (EO114) is **23 November 2023 for most countries** .

2.2. Countries and country groupings

Since EO 109, the OECD aggregate includes Costa Rica which became a member of the OECD on 25th May 2021. Since EO 112, Peru and Croatia, are included and presented as non OECD countries.

2.3. Variables

OECD reference year

The reference year for prices and indices related to the external sector (balance of payments and trade) was changed from 2010 to 2015 in the EO105 edition. The change affects all variables expressed in constant USD (OECD reference year exchange rate or reference year PPP), indices based on the OECD reference year, and all aggregates computed by the OECD.

2.4. Changes in methodology

2.4.1. National accounts

All OECD countries have implemented the SNA 2008 methodology (or ESA 2010, its European equivalent). Links to international manuals and country-specific material can be found on this OECD web page:

<https://www.oecd.org/sdd/na/implementingthesystemofnationalaccount2008.htm>

All changes undertaken by national statistical offices (revisions in national accounts, implementation of new classifications, revised seasonal adjustment techniques, or extension of series in the past) which were available before the above-mentioned cut-off date have been taken into account in the EO database.

The status of national accounts in OECD countries is summarised in Annex 3:

→ [Table A3-1: Coverage and reporting systems](#)

2.4.2. Balance of payments

All countries follow the BPM6 methodology; BPM6 is the acronym for the sixth edition of the “Balance of Payments and International Investment Position Manual”. The Manual serves as the standard framework for the compilation of statistics on the transactions and positions between an economy and the rest of the world. It promotes consistency between different data sets, notably with national accounts.

→ [Sixth Edition of the IMF's Balance of Payments and International Investment Position Manual \(BPM6\)](#)

2.4.3. Quarterly national accounts

Flash estimates

For some countries, the EO database incorporates preliminary “flash” estimates of GDP for the third quarter of 2023. These releases are often accompanied by a revision of past quarters. A second data release by the national authorities will confirm or adjust these first “flash” estimates later on after the Economic Outlook release.

For some countries, only total GDP at constant prices (code: GDPV) is concerned by the flash release. In consequence, the breakdown between expenditure components over the recent period should be regarded as a judgmental projection.

Frequency issues

As explained in section 1.2.4. [Frequency, annualisation and seasonal adjustment](#), annual data in the EO database are usually derived from quarterly figures. Consequently, annual EO data may sometimes include working day adjustments (WDA) and thus slightly differ from the official release of annual data (which usually excludes this kind of adjustments or applies a different one).

When annual and quarterly revisions are published at different dates and/or when the differences between the two frequencies are too important, then quarterly figures may be benchmarked on the annual values (Chow Lin method)¹ i.e. the quarterly profiles are kept but the quarterly levels in national currency are modified so that, when added up, they lead to the official annual data. (See 2.4.6. [Main changes by country](#) for more information).

2.4.4. OECD supply-side estimates

Potential output, productive capital stock, labour efficiency, employment rate

The methodology for the calculation of potential output and other trend variables can be found in [Annex 5. Estimation of potential output](#). The method changed in EO 110 edition by replacing the equilibrium unemployment rate (NAIRU) by a new variable Employment rate (ER1574 and ERS1574).

The supply data are only available on an annual basis. The absence of quarterly figures is the result of a major revision of the forecasting procedures which was undertaken in the 91st edition of the Economic Outlook (EO91). Supply indicators are calculated by combining various series, a majority of which are only available on an annual basis.

Computation of the underlying fiscal balance

Frequent recourse to large one-off operations in a number of OECD countries has undermined the accuracy of the cyclically-adjusted fiscal balance as a measure of both the sustainability of public finance and the fiscal stance. To overcome this problem, the Economic Outlook database includes the underlying fiscal balance, which effectively eliminates the impact of one-offs and cyclical developments. Formally, for each OECD economy, the underlying net lending (code: NLGQU) is computed as the difference between the cyclically-adjusted net lending (code: NLGQA) and the net one-offs (code: NOOQ), all expressed in per cent of GDP. Historical data for net one-offs are derived from previous Economic Outlooks.² Over the projection period, net one-offs are estimated using budget information or official announcements.

2.4.5. Labour force statistics

For European countries, from 2021Q1, labour market indicators (labour force LF, total employment ET, Unemployment UN and unemployment rate UNTR), are consistent with the new Framework Regulation 2019/1700 (Integrated European Social Statistics Regulation). This new Regulation further improves harmonisation and comparability of labour market data in the EU.

2.4.6. Main changes and remarks by country

Annex 3 of this documentation shows national reference years, periods covered, system of definition used and national currencies.

Austria

- **National accounts:** In September, data were revised to take into account the central bank real data which replace estimates. A new seasonal adjustment model have also been implemented. Major changes in the model were implemented for the exports of goods and services.

Bulgaria:

- **Labour and population:** in year 2022, quarterly data are based on the 2021 census results.

Colombia

- **National accounts:** Quarterly data are benchmarked to annual figures (applying the Chow Lin method) and as a consequence may differ slightly from national data.

Costa Rica

- **National accounts:** Quarterly data are benchmarked to annual figures (applying the Chow Lin method) and as a consequence may differ slightly from national data.

Czechia

- Labour data: New calculation method based on new weighting scheme

Germany

- **National accounts:** Quarterly data are benchmarked to annual figures (applying the Chow Lin method) and as a consequence may differ slightly from national data.

Israel

- **National accounts:** Quarterly data are benchmarked to annual figures (applying the Chow Lin method) and as a consequence may differ slightly from national data.

Latvia

- **National accounts:** Significant revisions for 2021 as a consequence of COVID-19 pandemic.
- **National accounts:** Quarterly data are benchmarked to annual figures (applying the Chow Lin method). This benchmark does not modify the quarterly profile and the growth rates but it has an impact on the levels. For Latvia, preference has been given not to show the benchmarked quarters

Romania

- **National accounts:** Methodological revision of national accounts data. Changes include chain linking method and seasonal adjustment techniques.

Slovenia

- **National accounts:** Revisions in GDP mainly due to improvement in annual sourcing.

Switzerland

- **Trade data:** The Swiss National Bank uses a new survey to collect data on balance of payments. Trade data in national accounts is also impacted.

United Kingdom

- **National accounts:** Revisions in GDP due to new methods and sources.

2.4.7. Last historical points

Last historical points can be found in an excel file under “Export > Related files” in OECD.stat. All data after these historical points are forecasts or projections.

2.4.8. Country base years / Standard OECD reference year

A switch to a new reference year may or may not involve major conceptual modification. However, any change in the reference year has an impact on the levels of chained volume measure series rebased to the reference year.

Though the terms often refer to the same concept, “reference year” is usually limited to a simple statistical presentation; in contrast, the term “base year” describes a period during which detailed, revised and improved surveys are conducted. A base year is often used to establish benchmark values from which other data are derived.

For most variables, base years (or reference years) are specific to each country. The following countries have changed their national base year since the last edition:

Ireland	From 2020 to 2021
Mexico	From 2013 to 2018
Russia	From 2016 to 2021
United States	From 2012 to 2017

Aggregates (such as OECD total, Non OECD economies, World, Oil producers, rest of the world) are using a standard OECD reference year.

YPEPGX	Property income paid by general government, excluding interest payments
YPERGX	Property income received by general government, excluding interest receipts
TAXQ	Taxes and social security contributions received by general government as a percentage of GDP
RFSH	Share of outstanding marketable debt to refinance within coming period

Table A2.3. Expenditure and GDP

Gross domestic Product (expenditure approach) - Current prices	
GDP	Gross domestic product, nominal value, market prices
GDP_USD	Gross domestic product, nominal value in USD, OECD reference year exchange rates
CP	Private final consumption expenditure, nominal value, GDP expenditure approach
CG	Government final consumption expenditure, nominal value, GDP expenditure app.
ITISK	Gross capital formation, total, nominal value
IT	Gross fixed capital formation, total, nominal value
FBGS	Net exports of goods and services, nominal value (national accounts basis)
MGS	Imports of goods and services, nominal value (national accounts basis)
XGS	Exports of goods and services, nominal value (national accounts basis)
Gross domestic Product (expenditure approach) - Volume, constant prices	
GDPV	Gross domestic product, volume, market prices
GDPV_USD	Gross domestic product, volume in USD, OECD reference year exchange rates
GDPVD	Gross domestic product, volume in USD, at OECD reference year PPP
CPV	Private final consumption expenditure, volume
CGV	Government final consumption expenditure, volume
ITISKV	Gross capital formation, total, volume
ITV	Gross fixed capital formation, total, volume
MGSV	Imports of goods and services, volume (national accounts basis)
XGSV	Exports of goods and services, volume (national accounts basis)
Final and total expenditure - current and constant prices	
FDD	Final domestic expenditure, nominal value
FDDV	Final domestic expenditure, volume
TEV	Total expenditure, volume
TDD	Total domestic expenditure, nominal value
TDDV	Total domestic expenditure, volume
MTDDV	Modified total domestic expenditure, volume
Investment	
IHV	Gross fixed capital formation, housing, volume
IBV	Private non-residential gross fixed capital formation, volume
IBGV	Private non-residential and government fixed capital formation, volume
IGV	Government gross fixed capital formation, volume
IOILV	Gross fixed capital formation of the oil industry, volume
ISHV	Gross fixed capital formation of the shipping industry, volume
IOBV	Gross fixed capital formation of private non-residential industry excl. shipping and oil, volume
ICSA	Fixed investment, country specific, volume
Mainland/Offshore (Norway-specific variables)	
GDPML	Mainland gross domestic product, nominal value, market prices
GDPMLV	Mainland gross domestic product, volume, market prices
GDPOFS	Offshore gross domestic product, nominal value, market prices
GDPOFSV	Offshore gross domestic product, volume, market prices
Other variables	
CQ_FBGSV	Net exports contributions to changes in real GDP, percentage points
FBGSQ	Net exports of goods and services, as a percentage of GDP
CQ_ISKV	Change in inventories, contributions to changes in real GDP, percentage points
GDPVCSA	Gross domestic product, volume, country specific
GDPV_CAP	Gross domestic product per capita, volume
GDPVD_CAP	Gross domestic product per capita, volume in USD, at OECD reference year PPP
GNP	Gross national product, nominal value, market prices
GNPV	Gross national product, volume, market prices
TEVD	Total expenditure, volume in USD, OECD reference year prices
R_GDPVWDS	Ratio of GDPV (sa) to GDPV (adjusted for working days and seasonal correction)

This table shows the status of national accounts in OECD countries. The periods in brackets indicate the availability of historical data based on the most recent definitions. Time series are backcast in the EO database using data from other sources. The starting point for the projections is the last available year/period +1. When quarterly data are available, these series are indicated with the symbol "q"; otherwise quarterly series are interpolated from the annual).

ANNEX 4: IDENTITIES

This section shows the relations between variables.

Some formula contain pre-defined functions (Eviews format):

- @EXP(x): Exponential
- @LOG(x): Natural logarithm
- @MEAN(x): Average
- @NAN(x,y): Recodes “not available” (NA) into y. Returns x if $x \neq \text{NA}$ and y if $x = \text{NA}$
- @PCH(x): One period percentage change (in decimal): $[x - x(-1)]/x(-1)$
- @PC(x): One period percentage change (in per cent) @PCH(x)*100

EXTERNAL SECTORS, TRADE AND PAYMENTS

TRADE AND COMPETITIVENESS FORMULAS

The OECD reference year is 2015 and 2015=100 for indices unless otherwise indicated.

References used throughout the formulas: i = country, p = partner country, r = reporting country and wld = world.

1. XDR: Competitiveness indicators^{1,2}

1.1. $w1$: Overall competitiveness weights

$$w1_{ij,t-1} = \sum_{k=1,\dots,N} \left(\frac{X_{ik,t-1}}{\sum_{k'=1,\dots,N} X_{ik',t-1}} \right) \times \left(\frac{X_{jk,t-1}}{\sum_{j'=1,\dots,N} X_{j'k,t-1}} \right) \text{ if } i \neq j$$

$$w1_{ij,t-1} = 0 \text{ if } i = j$$

where:

X_{ik} = exports of goods from country i to country k if $i \neq k$; production (net of exports) if $i = k$

N = number of markets (countries and regions)

1.2. XDR: Competitiveness indicator, in the reference year

$$XDR_{i,t} = XDR_{i,t-1} \times \exp \left(\ln \left(\frac{X_{i,t} \times EXCHIN_{i,t}}{X_{i,t-1} \times EXCHIN_{i,t-1}} \right) - \sum_{j \in OECD, NON17} w1_{ij,t-1} \times \ln \left(\frac{X_{j,t} \times EXCHIN_{j,t}}{X_{j,t-1} \times EXCHIN_{j,t-1}} \right) \right)$$

$$\sum_{j \in OECD, NON17} w1_{ij,t-1} = 1 \forall i$$

where:

XDR = CPIDR if X = CPI (based on relative consumer prices);
 ULCDR if X = ULC (based on relative unit labour costs in total economy)

$EXCHIN$ = exchange rate in reference year, index, USD per national currency

$NON17$ = Argentina, Brazil, Bulgaria, China, Chinese Taipei, Hong Kong China, India, Indonesia, Malaysia, Philippines, Roumania, Russia, Saudi Arabia, Singapore, South Africa, Thailand and Vietnam

2. Some countries are included in calculations from a specific year: 1993 for Czech Republic, Hungary, Poland, Russia and Slovak Republic; 1997 for Chile, Colombia, Costa Rica, Estonia, Israel, Lithuania, Saudi Arabia, Slovenia, Vietnam and South Africa.

1.3. **EXCHEB: Nominal effective exchange rate, chain linked, overall weights**

$$EXCHEB_{i,t} = EXCHEB_{i,t-1} \times \exp \left(\ln \left(\frac{EXCH_{i,t}}{EXCH_{i,t-1}} \right) - \sum_{j \in OECD, NON17} w1_{ij,t-1} \times \ln \left(\frac{EXCH_{j,t}}{EXCH_{j,t-1}} \right) \right)$$

$$\sum_{j \in OECD, NON17} w1_{ij,t-1} = 1 \quad \forall i$$

where:

EXCH = exchange rate, USD per national currency

w1 = overall competitiveness weights

NON17 = Argentina, Brazil, China, Chinese Taipei, Colombia, Costa Rica, Hong Kong China, India, Indonesia, Malaysia, Philippines, Russia, Saudi Arabia, Singapore, South Africa, Thailand and Vietnam

2. **XMKT: Export market for goods and services, volume in USD, reference year prices**

$$XMKT_i = \sum_{p=1}^N \frac{XGS_{i \rightarrow p}}{XGS_{wld \rightarrow p}} \times MGSVD_p$$

where:

XGS_{i→p} = goods and services exports value in the reference year, from country *i* to country *p*

XGS_{wld→p} = global goods and services exports value in the reference year, to country *p*

MGSVD_p = import volume of country *p* in USD, reference year prices

3. **PXGSX / PMGSX: Price of non-commodity exports / imports of goods and services**

Exports

$$PXGSX_i = \exp \left(\frac{\log(PXGS_i) - wxn_i \times \log(PXNW_i)}{1 - wxn_i} \right)$$

Imports

$$PMGSX_i = \exp \left(\frac{\log(PMGS_i) - wmn_i \times \log(PMNW_i)}{1 - wmn_i} \right)$$

where:

PXGS = prices of goods and services exports

PXNW = prices of commodity exports

wxn = weight of commodities in goods and services exports

PMGS = prices of goods and services imports

PMNW = prices of commodity imports

wmn = weight of commodities in goods and services imports

4. PMSHX: Shadow price of non-commodity goods and services imports

$$PMSHX_i = \left(\sum_{p=1}^N \frac{XGS_{p \rightarrow i}}{XGS_{wld \rightarrow i}} \times PXGSX_p \times EXCHIN_p \right) \times \frac{1}{EXCHIN_i}$$

where:

$XGS_{p \rightarrow i}$ = goods and services exports value in the reference year, from country p to country i

$XGS_{wld \rightarrow i}$ = global goods and services exports value in the reference year, to country i

$PXGSX_p$ = price of non-commodity exports of goods and services for country p , reference year=1

$EXCHIN$ = exchange rate, index, USD per national currency

5. Competitors' price of goods and services exports (PXC) and non-commodity goods and services exports (PXCX)

Goods and services exports

$$PXC_i = \left(\sum_{\substack{p=1 \\ p \neq i}}^N \frac{XGS_{i \rightarrow p}}{XGS_{wld \rightarrow p} - XGS_{i \rightarrow p}} \times \frac{1}{XGS_{i \rightarrow wld}} \times \sum_{\substack{r=1 \\ r \neq i, p}}^N XGS_{r \rightarrow p} \times PXGS_r \times EXCHIN_r \right) \times \frac{1}{EXCHIN_i}$$

Non-commodity goods and services exports

$$PXCX_i = \left(\sum_{\substack{p=1 \\ p \neq i}}^N \frac{XGS_{i \rightarrow p}}{XGS_{wld \rightarrow p} - XGS_{i \rightarrow p}} \times \frac{1}{XGS_{i \rightarrow wld}} \times \sum_{\substack{r=1 \\ r \neq i, p}}^N XGS_{r \rightarrow p} \times PXGSX_r \times EXCHIN_r \right) \times \frac{1}{EXCHIN_i}$$

where:

$XGS_{i \rightarrow p}$ = goods and services exports value in the reference year, from country i to country p

$XGS_{wld \rightarrow p}$ = global goods and services exports value in the reference year, to country p

$XGS_{i \rightarrow wld}$ = global goods and services exports value in the reference year, from country i

$XGS_{r \rightarrow p}$ = goods and services exports value in the reference year, from country r to country p

$PXGS_r$ = price of exports of goods and services, reference year=1, for country r

$PXGSX_r$ = price of non-commodity exports of goods and services, reference year=1, for country r

$EXCHIN$ = exchange rate, index, USD per national currency

6. PXGSD / PMGSD: World exports / imports of goods and services in USD, deflator, reference year prices

Exports

$$WLD.PXGSD_t = \frac{\sum_{i \in wld} XGSD_{i,t}}{\sum_{i \in wld} XGSVD_{i,t}}$$

Imports

$$WLD.PMGSD_t = \frac{\sum_{i \in wld} MGSD_{i,t}}{\sum_{i \in wld} MGSVD_{i,t}}$$

where:

$XGSD$	= exports of goods and services, nominal value in USD
$XGSVD$	= exports of goods and services, volume in USD, reference year prices
$MGSD$	= imports of goods and services, nominal value in USD
$MGSVD$	= imports of goods and services, volume in USD, reference year prices

7. EXCHE: Nominal effective exchange rate, constant trade weights

$$EXCHE_{i,t} = \frac{EXCHIN_i}{\exp \sum_{p \in wld, p \neq i} \Omega_{i,p} \log(EXCHIN_p)}$$

where:

$EXCHIN$ = exchange rate in reference year, index, USD per national currency

8. TGSVD: Goods and services trade volume in USD, reference year prices

$$TGSVD_{i,t} = 0.5 \times XGSVD_{i,t} + 0.5 \times MGSVD_{i,t}$$

where:

$MGSVD$	= imports of goods and services, volume in USD, reference year prices
$XGSVD$	= exports of goods and services, volume in USD, reference year prices

9. SHTGSVD: Share of country's trade in world trade (volume in USD, reference year prices)

$$SHTGSVD_{i,t} = \frac{TGSVD_{i,t}}{\sum_{p \in wld} TGSVD_{p,t}}$$

where:

$TGSVD$ = Goods and services trade volume in USD, reference year prices

10. CTGSVD: Contribution to world trade growth, goods and services (in USD, reference year prices), percentage points

$$CTGSVD_{i,t} = \frac{TGSVD_{i,t} - TGSVD_{i,t-1}}{\sum_{p \in wld} TGSVD_{p,t-1}}$$

where:

$TGSVD$ = Goods and services trade volume in USD, reference year prices

11. XSHA / MSHA: Share in the value of world exports / imports of goods and services (in USD)**Exports**

$$XSHA_{i,t} = \frac{XGSD_{i,t}}{\sum_{p \in wld} XGSD_{p,t}}$$

Imports

$$MSHA_{i,t} = \frac{MGSD_{i,t}}{\sum_{p \in wld} MGSD_{p,t}}$$

where:

MGSD = imports of goods and services, nominal value in USD

XGSD = exports of goods and services, nominal value in USD

ESTIMATION OF POTENTIAL OUTPUT

1. Capital stock

For OECD countries, the physical capital is defined as the whole economy measure of productive capital (code KTPV) and is generally derived from non-housing investment flows. The sources of capital stock differ between countries as follows:

Data from Statistics and Data Directorate (derived from National Accounts)	AUS, AUT, BEL, CAN, CHE, DEU, DNK, ESP, FIN, FRA, GBR, IRL, ITA, JPN, KOR, NLD, NZL, PRT, SWE, USA
Economics Department estimate using a Perpetual Inventory Method	
• with housing investment	BGR, CHL, COL, CZE, EST, GRC, HUN, ISL, ISR, LTU, LUX, LVA, MEX, NOR, POL, ROU, SWE, SVK, SVN
• without housing investment	ARG, BRA, CHN, CRI, IDN, IND, RUS, SAU, TUR
Obtained from national sources	ZAF

2. Potential output

Potential output is defined for the total economy using a common production function, namely a constant-returns-to-scale Cobb-Douglas function with Harrod-neutral labour-augmenting technical progress.

The assumed production function can be represented as the following:

$$GDPV = (EFFLAB * ET_NA)^\alpha * (KTPV_AV)^{(1-\alpha)}$$

where $GDPV$ is real GDP; $EFFLAB$ represents labour efficiency, ET_NA denotes total employment according to the national accounts concept; $KTPV_AV$ measures the whole economy stock of capital excluding residential structures; and α denotes the share of national income accruing to labour, assumed to be 0.67 and constant in all countries.

Total employment (ET_NA) can be decomposed into the product of: the aggregate employment rate for those aged 15-74 ($ER1574$) and the population aged 15 to 74 ($POP1574$):

$$ET_NA = POP1574 * \frac{ER1574}{100}$$

Combining these two equations the representation of output becomes:

$$GDPV = \left[EFFLAB * POP1574 * \frac{ER1574}{100} \right]^\alpha * (KTPV_AV)^{(1-\alpha)}$$

The level of potential output ($GDPVTR$) is obtained by substituting each variable in this equation by its estimated trend component, with the exception of the capital stock, which remains at its actual value. Both the trend aggregate employment rate ($ERS1574$) and trend labour efficiency ($EFFLABS$) are computed by first cyclically adjusting the actual rate using country-specific regression equations and then applying a HP filter to the cyclically-adjusted series. The goal of this procedure is to limit the end-point bias associated with the HP filter.

$$GDPVTR = \left[EFFLABS * POPS1574 * \frac{ERS1574}{100} \right]^\alpha * (KTPV_AV)^{(1-\alpha)}$$

where $EFFLABS$, $POPS1574$ and $ERS1574$ are the trended counterparts of $EFFLAB$, $POP1574$ and $ER1574$, respectively.

A detailed description can be found in OECD Working Paper No. 1563 “The OECD potential output estimation methodology”.³

The supply data are only available on an annual basis. The absence of quarterly figures is the result of a major revision of the forecasting procedures which was undertaken in the 91st edition of the Economic Outlook (EO91). Supply indicators are calculated by combining various series, a majority of which are only available on an annual basis.

ANNEX 6: COUNTRY GROUPINGS AND AGGREGATES

The aggregation method used to construct the OECD area (38 countries) and the OECD euro area (17 OECD countries also members of the euro area) is either a moving weighting scheme or the direct aggregation of ratios. These approaches aim to better handle issues arising from the evolving composition of these areas and different data availability across countries.

<https://www.oecd.org/eco/outlook/aggregationmethods.htm>

Besides OECD and the OECD euro area, the following regions are distinguished:

- DAE - Dynamic Asian Economies (Chinese Taipei, Hong Kong, Malaysia, Philippines, Singapore, Thailand, Vietnam).
- OOP - Oil producers (Algeria, Angola, Azerbaijan, Bahrain, Brunei Darussalam, Chad, Democratic Republic of the Congo, Ecuador, Equatorial Guinea, Gabon, Iran, Iraq, Kazakhstan, Kuwait, Libya, Nigeria, Oman, Qatar, Saudi Arabia, South Sudan, Timor-Leste, Trinidad and Tobago, Turkmenistan, United Arab Emirates, Venezuela, Yemen).
- RWD - Countries which are not included in any groups form a residual “rest of the world” group.
- WLD – All countries

The aggregation of world trade¹ is obtained by combining OECD countries, non-OECD countries for which forecasts are made, dynamic Asian economies, oil producers and the rest of the world.

Other country groupings are originating from Table 16 of the Economic Outlook statistical annex:

The data source for table 16 is the AIE Oil Market Report: <https://www.iea.org/topics/oil-market-report>

Definition of most groups is described in report glossary: <https://www.iea.org/articles/oil-market-report-glossary>

Former Soviet Union (FSU) comprises Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine and Uzbekistan.

OPEC includes its current 13 members are Algeria, Angola, Equatorial Guinea, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, the Republic of Congo, Saudi Arabia, the United Arab Emirates and Venezuela.
