

Towards an action plan

Main streams of work

- What to measure
- How to measure
- How to present
- Risks

Key assumptions

- The crisis is not going to disappear soon
- The crisis is an opportunity to build a solid “social statistics framework”
- We want to invest with a long-term vision
- There is a role for international organisations

What to measure

- Labour related
- Exposure to risks/vulnerability
- Non-monetary poverty
- Benefits/beneficiaries
- Feelings/satisfaction/happiness/unhappiness
- Trust, social cohesion, social capital
- Look at the society as a whole
- Assets
- Gross and net measures (lay-offs)
- Long-term impact on human and social capital
- Intergenerational aspects

How to measure

- LFS and ad-hoc surveys (subjective/objective)
- Opinion surveys (BTS and COS, Gallup/Eurobar.)
- Intermediaries (NGOs, financial sector, househ.)
- Administrative data
- Models
- Low-hanging fruits:
 - flash estimates
 - better indicators on existing data
 - microdata
 - panels

Presentation

- Holistic view
- Visualisation tools
- Perceptions/reality
- Policies impact/final outcomes
- Comprehensive framework

Risks

- **Under-reporting/over-reporting**
- **Evaluate the long-term impact on statistical policies**
- **Public access to data financed by public money**
