

New job opportunities in an ageing society

Policy challenges and responses

Stefano Scarpetta

Director of Employment, Labour and Social Affairs, OECD

G20 LEMM, Matsuyama, Japan

1 September 2019

Technologies can help professionals work in smarter ways

Assistive technologies

Devices that allow an individual to perform a task or increases ease and safety

E.g. fall detectors, tracking systems

Remote care and disease monitoring technologies

For the monitoring of disease or home adjustment treatment

E.g. Home adjustment , monitoring of vital signs and alarms

Social technologies

Structure and create social circles of support and help connect elderly with family, peers and community

E.g. Social networks for professionals, real time audio-visual contact

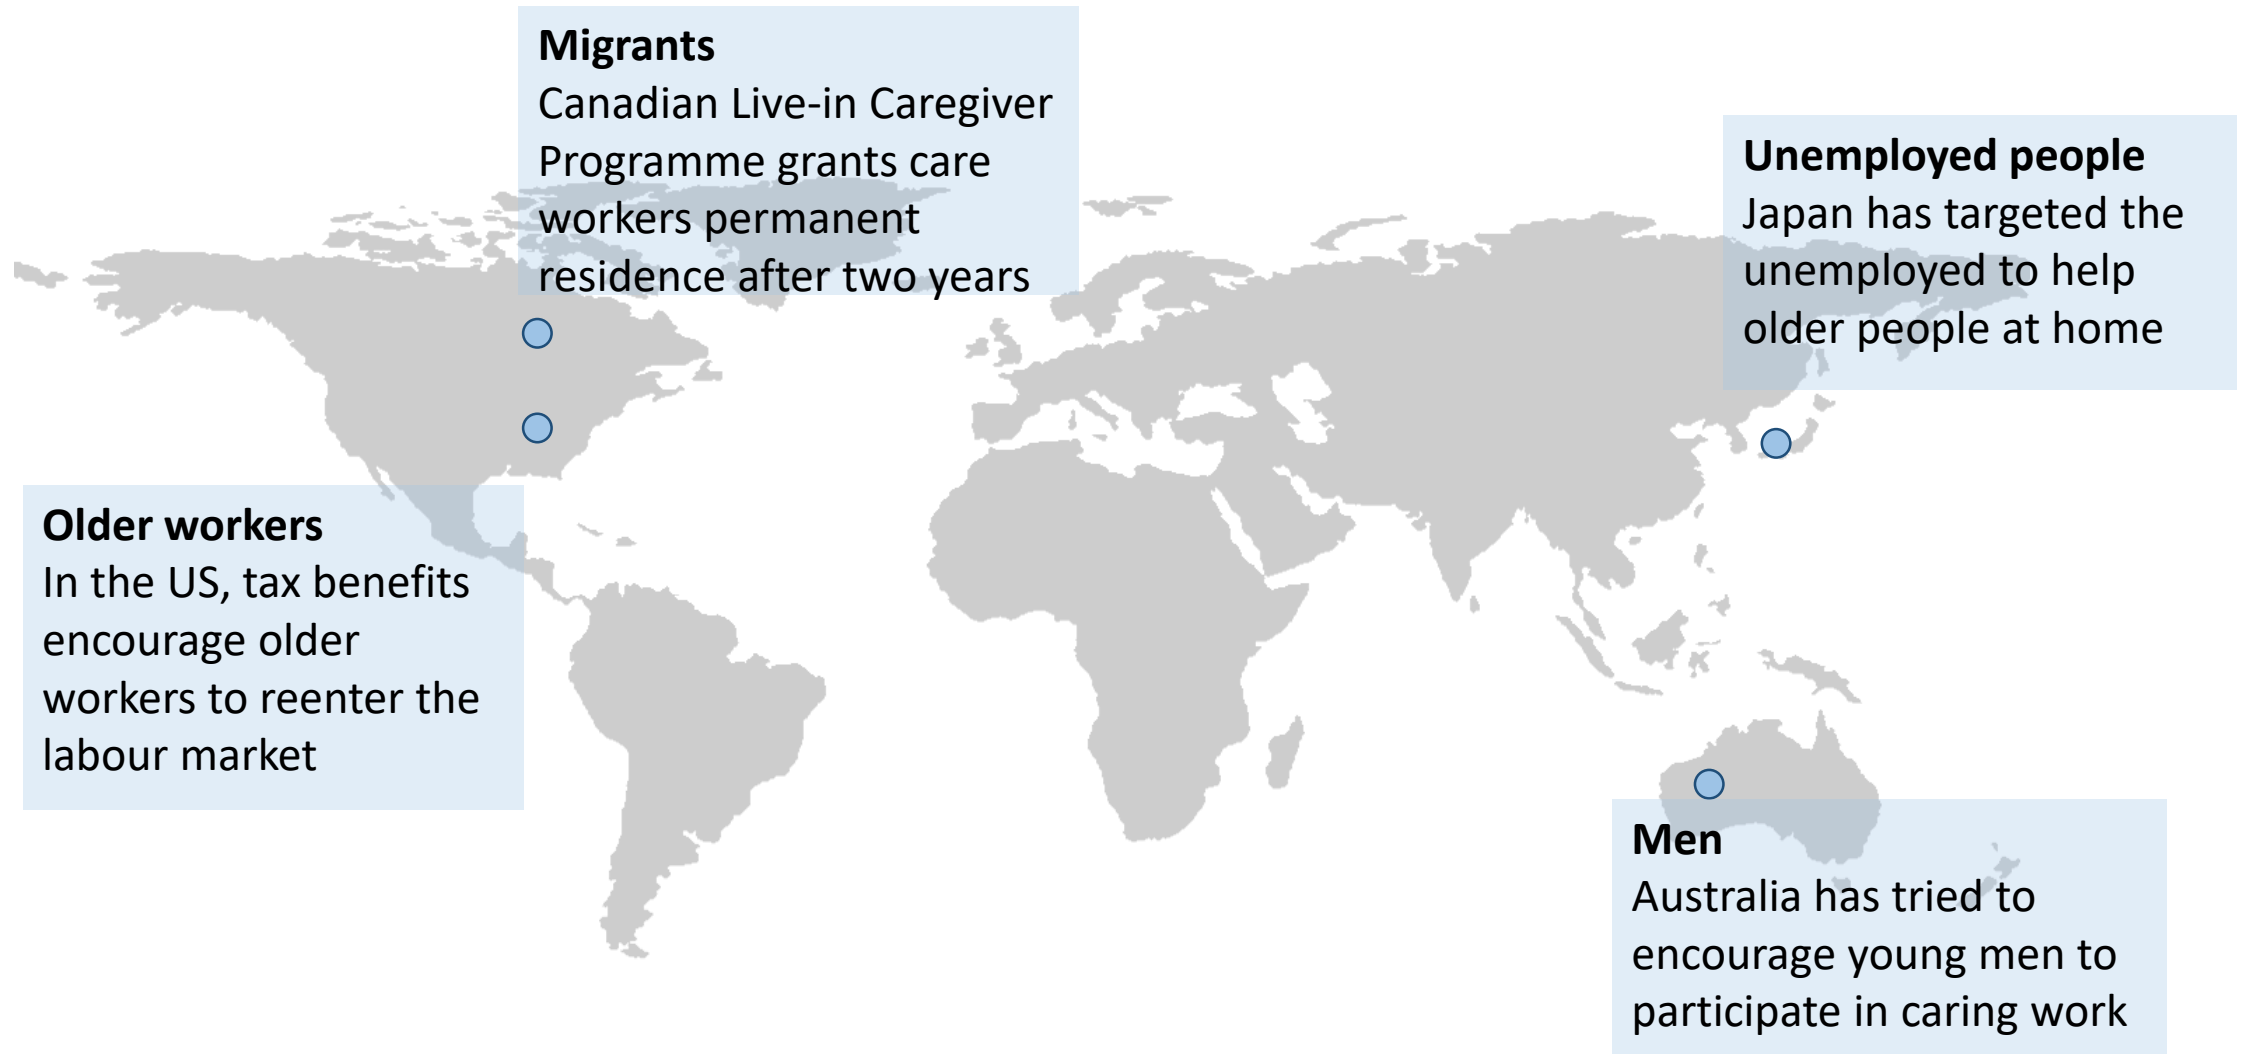

Self-management technologies

Enables elderly to take control of personal health and care management

E.g. Telephones with easy to read buttons, drug dispensers.

Some countries target specific groups to increase recruitment

Policy responses

Improve care supply and job quality

Adequate fiscal space and financing

Addressing poor quality LTC jobs

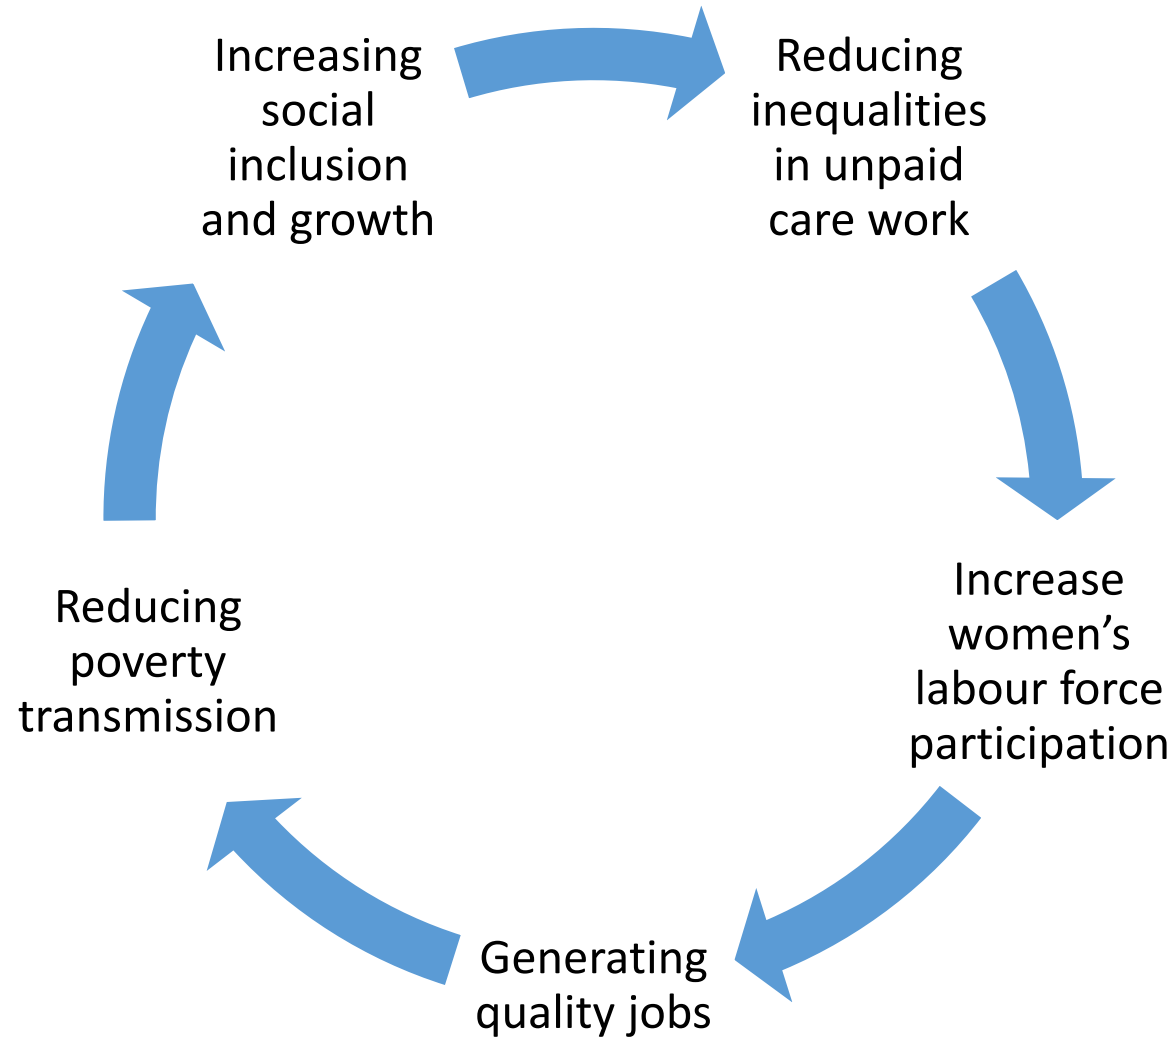

Promoting healthy ageing

Investing in appropriate technology

Creating a virtuous circle

Requires a **comprehensive policy package** reshaping social protection, care, labour and migration policies.

Thank you
