The Danish government experienced a positive, although minor, net savings

In 2015 the difference between government expenditures and revenues, excluding capital expenditures, reached positive net savings of 0.2% of GDP, while OECD countries on average had negative net savings of -2.2% of GDP. The Danish fiscal stance remains almost neutral recording a structural primary balance of -0.1% of potential GDP in 2015, improving by 0.4 p.p. from the 2009 level. In 2016, this level remains unchanged.

The use of digital public services by citizens is the highest in Denmark among OECD countries

Governments are striving to modernise public service delivery in line with private sector’s practices by enabling digital access, replacing costly procedures with more efficient, transparent, reliable and convenient digital solutions. The uptake of digital services among OECD countries is the highest in Denmark, as the proportion of individuals who submit forms via public authorities’ websites in 2016 was above 70%, double the OECD average of 35%.

The financial crisis increased income inequalities in Denmark, by affecting disproportionally the income of the bottom 10% of the income distribution

While income distribution in Denmark is relatively low (the Gini coefficient of disposable income in 2013 was 0.26), between 2007 and 2013 the real labour income of the bottom 10% of the income distribution fell by 32%, while the real income of both the top 10% grew by 7% and the average income decreased by 4%. Among OECD countries, the change in real labour income growth of the lowest 10% of the population was -14%.
Public Finance and Economics

Fiscal balance* (2015, 2016) % of GDP

Government expenditures (2015, 2016) % of GDP

Government investment (2015, 2016) % of GDP

Government gross debt* (2015) % of GDP

General government employment as % of total employment (2015)

Women in the civil service ... and in senior positions (2015)

Percentage of central government employees aged 55 years or older (2015)

Public Sector Compensation

Annual compensation across central government positions (2015)

**Fiscal balance** as reported in the System of National Accounts (SNA) framework, also referred to as net lending (+) or net borrowing (-) of government, is calculated as total government revenues minus total government expenditures.

**Regulatory governance indicators:** The results for stakeholder engagement and Regulatory Impact Assessment apply exclusively to processes for developing primary laws initiated by the executive. Data is not applicable to the United States, where all primary laws are initiated by Congress. In the majority of countries, most primary laws are initiated by the executive, except for Mexico and Korea, where a higher share of primary laws are initiated by parliament/congress (respectively 90.6% and 84%).

**Government gross debt** is reported according to the SNA definition, which differs from the definition applied under the Maastricht Treaty. It is defined as all liabilities that require payment or payments of interest or principal by the debtor to the creditor at a date or dates in the future. All debt instruments are liabilities, but some liabilities such as shares, equity and financial derivatives are not debt.

**Government at a Glance 2017**

Government at a Glance provides readers with a dashboard of key indicators assembled with the goal of contributing to the analysis and international comparison of public sector productivity and performance. Indicators on government revenues, expenditures, and employment are presented, alongside key output and outcome data for education, health and justice. Information on key enablers to increase productivity including on digital government, budget procedures, strategic human resource management, open government data and innovative practices are also included. In a context of tight budget constraints in many member countries, good indicators are needed more than ever, in order to help governments make informed decisions regarding resource allocation and to help restore confidence in government institutions.

The Excel spreadsheets used to create the tables and figures in Government at a Glance 2017 are available via the StatLinks provided throughout the publication: [http://dx.doi.org/10.1787/gov_glance-2017-en](http://dx.doi.org/10.1787/gov_glance-2017-en)
