OECD
BETTER POLICIES FOR BETTER LIVES

Government at a Glance 2021 Country Fact Sheet

Estonia

Estonia is a leader in digitalising public procurement. Estonia is one of only four OECD countries with a full range of functions built in to its e-procurement systems (Figure 8.5).

Chapter 8 – Public procurement

Figure 8.5. Provision of e-procurement functionalities, 2018

Estonia performs exceptionally in quality of education, but problems with access and responsiveness remain. Estonia scores first in the OECD on a range of measures of quality of the education system (Scorecard 3), but is behind most OECD members on measures of accessibility and responsiveness of education, such as early childhood enrolment rates and availability of educational material (Scorecards 1 and 2).

Chapter 14 – Serving citizens

Estonia has made highly progressive changes to taxes and transfers to help combat poverty. Estonia has the 7th highest poverty rate in the OECD, and poverty increased during 2012-18. However, Estonia made the most progressive changes to its tax and transfer systems of any OECD member during 2012-18 (Figure 13.8), and now ranks 12th best in the OECD on inequality after taxes and transfers (Figure 13.7).

Chapter 13 – Core government results

Figure 13.7. Differences in household income inequality among the working-age population pre and post-tax and government transfers, 2018

Figure 13.8. Difference after taxes and transfers in the Gini coefficient score for the working-age population, between 2012 and 2018

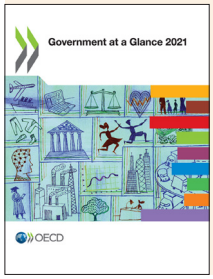
Figure notes

- Data on Public finance and economics, which are based on the System of National Accounts (SNA), were extracted on 11 May 2021 and data on General government employment were extracted on 12 April 2021. The range of country values refers to year 2019.
- Fiscal balance as reported in SNA framework, also referred to as net lending (+) or net borrowing (-) of government, is calculated as total government revenues minus total government expenditures.
- Government gross debt is reported according to the SNA definition, which differs from the definition applied under the Maastricht Treaty. It is defined as all liabilities that require payment or payments of interest or principal by the debtor to the creditor at a date or dates in the future. All debt instruments are liabilities, but some liabilities such as shares, equity and financial derivatives are not debt.
- The range of country values for the central government workforce by age refers to the 18-34 group.
- Data on trust in the civil service and parliament are 2018 for most countries.
- The range of country values for share of women in management positions in the central government refers to senior management.
- Citizens who express satisfaction with public services: for the judiciary and the police, the data reflect the proportion of citizens who express having confidence in the institution.
- The range of country values for income inequality before taxes and post taxes and transfers refers to GINI after taxes and transfers for the working age population.

Government at a Glance 2021

Published every two years, **Government at a Glance** provides reliable, internationally comparable indicators on government activities and their results in OECD countries.

The 2021 edition includes input indicators on public finance and employment; while processes include data on institutions, budgeting practices and procedures, human resources management, regulatory governance, public procurement, the governance of infrastructure, public sector integrity, open government and digital government. Outcomes cover core government results (e.g. trust, political efficacy, inequality reduction) and indicators on access, responsiveness, quality and citizen satisfaction for the education, health and justice sectors. Governance indicators are especially useful for monitoring and benchmarking governments' progress in their public sector reforms.



Each indicator in the publication is presented in a user-friendly format, consisting of graphs and/or charts illustrating variations across countries and over time, brief descriptive analyses highlighting the major findings conveyed by the data, and a methodological section on the definition of the indicator and any limitations in data comparability.

The Excel spreadsheets used to create the tables and figures in Government at a Glance 2021 are available via the StatLinks provided throughout the publication: **https://doi.org/10.1787/1c258f55-en**
