FOREWORD

Expanding access to complementary pathways and family reunification is a key objective of the Global Compact on Refugees. To connect refugees to safe pathways, systems must be adapted and scaled to individuals who have been affected by forced displacement. Such efforts can alleviate the pressure on countries generously hosting refugee populations, boost refugee self-reliance, and benefit destination countries.

In December 2023, the international community came together for the second convening of the Global Refugee Forum. States, international organizations, refugee-led organizations, civil society, private sector actors and others joined forces and made concrete commitments in support of refugees. These commitments, also known as pledges, seek to lift the barriers keeping refugee families apart, preventing displaced individuals from relocating for work or study purposes, and blocking sponsorship opportunities.

As we move from commitment to action, this update to the “Safe Pathways for Refugees” report is a tool to monitor progress and gaps and inform the next steps of stakeholders in meeting their pledges.

Data included in this study from the Organisation for Economic Co-Operation and Development (OECD) and the Office of the United Nations High Commissioner for Refugees (UNHCR) indicate that nearly 2.3 million individuals from seven nationalities were issued entry permits by OECD countries and Brazil between 2010 and 2022, with over 240,000 granted in 2022. Behind each of these figures are people who

have worked to build a new life in communities that have generously welcomed them.

The study also confirms that, except for 2020 during the pandemic, we have achieved the benchmarks laid out in Roadmap 2030 and, so far, exceeded the cumulative target. The foundation has been made, but to continue meeting our targets, systems must be built to include refugees in mobility frameworks. This requires moving beyond individual admissions and small refugee-specific education and employment pathways pilots towards addressing the barriers preventing family reunification and increasing opportunities for named sponsorship. Refugees need to be better included in migration streams with their protection needs guaranteed, machine-readable travel documents should become widely available to more refugees, and States, private actors, international organizations and other key actors need to step up their actions.

In a global context of increasing displacement, it is vital to create more safe and legal pathways for refugees to be able to build their lives away from war, conflict and persecution.

Highlights 2010–2022

Nearly **2.1 million nationals** from seven origin countries associated with large numbers of refugees¹ arrived in OECD countries and Brazil for family, work and study purposes from 2010 to 2022.

Family permits make up **63 per cent** of all permits granted, with over 1.32 million issuances over the reported period; family reunification is a rights-based pathway that protects family unity.

Student and labour permits amount to **19 per cent and 18 per cent** of all permits granted, with a total ca. 394,000 and 378,000 permits issued, respectively; these skills-based pathways allow individuals to access education and livelihood opportunities.

In addition to work, study and family permits, a further ca. **170,000 individuals** arrived in OECD countries during this period via sponsorship pathways streams to Canada and Australia, relying on connections to groups and individuals in the host country.

2.1 million permits : 710,000 resettled refugees²—The number of first-time residence permits for family, work, and education purposes for refugees of the seven nationalities covered in the report versus refugee arrivals of these nationalities via resettlement. This represents a ca. **3:1 ratio** between these permits to resettlement.

During the entire reported period of data collection, the highest number of permits for the studied nationalities were granted by **Germany, the United States, Sweden, Canada, and the United Kingdom.**

¹ Afghanistan, Eritrea, Iran, Iraq, Somalia, Syria, Venezuela

Background

WHAT IS IT?

This is the fourth edition of “Safe Pathways for Refugees,”³ a publication series that forms part of an ongoing joint project between UNHCR and OECD to address information gaps and build a foundation of evidence on complementary pathways. The project began in 2018 and compiles statistical information from 37 OECD countries and Brazil between 2010 and 2022. It focuses on the pathways of family reunification, education, and labour mobility of seven nationalities (Afghans, Eritreans, Iranians, Iraqis, Syrians, Somalis, and Venezuelans); ongoing work aims to expand analyses to humanitarian admissions and further incorporate information about named sponsorship permits. This latest edition provides an update including new data for 2022 and some revisions to earlier figures as part of a continuous effort to improve the existing evidence base on complementary pathways.

WHY DO WE NEED IT?

The Global Compact on Refugees (GCR),⁴ affirmed in 2018, has laid out the objective to expand access to third country solutions including resettlement opportunities as well as complementary pathways for the safe admission of refugees. Complementary pathways supplement the refugee resettlement system by offering additional safe and legal admission avenues to refugees and other persons in need of international protection who are outside their country of origin and are seeking opportunities in a third country.⁵ Complementary pathways for admission should contribute to a progressive approach to solutions, ensuring access to rights and opportunities that can help meet needs

and lead to a comprehensive solution. Findings from the first round of this joint OECD-UNHCR project were used to establish a global target on complementary pathways in “The Three-Year Strategy (2019–2021) on Resettlement and Complementary Pathways” (3YS), a multi-stakeholder, multi-sectoral blueprint on the process of the GCR objective of expanding third country solutions.⁶ Following up on the 3YS, in June 2022 the “Third Country Solutions for Refugees: Roadmap 2030” (hereafter Roadmap 2030)⁷ set the target of 2.1 million admissions via complementary pathways between 2019 and 2030. However, Roadmap 2030 notes the difficulty of tracking progress against this target, due to lack of data. This joint OECD-UNHCR project sets out to address this need for systematic and harmonized data collection on the use and availability of complementary pathways to build a robust evidence base. As such, the “Safe Pathways for Refugees” report series is a flagship publication on complementary pathways data allowing us to assess the impact of pathways programmes more effectively and to centre evidence-based programming.

LOOKING FORWARD

Roadmap 2030 provides updated information on enabling actions, along with short- and medium-term activities, more in-depth review of the third country solutions of family reunification, education, labour mobility, and other complementary pathways. In 2023, Roadmap 2030 notes the need for stocktaking aligned with the 2023 Global Refugee Forum (GRF). With multistakeholder pledges formed at the 2023 GRF on resettlement, skills-based complementary pathways, family

reunification, sponsorship and travel documents, there is continued momentum and commitment towards achieving the goals in Roadmap 2030. To support the process, the “Safe Pathways for Refugees” report remains essential to informing

stakeholders about progress towards achieving the Roadmap 2030 vision of admitting 2.1 million refugees via complementary pathways between 2019 and 2030.

3 Methodology, scope and data limitations

Generally continuing with the methodology of the 2023 joint report, this issue of the report expands the data collection exercise with figures for 2022 to reflect recent displacement trends (OECD-UNHCR, 2023).

The data collected in this project cover nationals of Afghanistan, Eritrea, Iran, Iraq, Somalia, Syria, and Venezuela, entering OECD countries and Brazil with regular visas or stay permits that may be related to complementary pathways for admission to third countries. These nationalities have been selected on the basis of several indicators and factors, including their high representation in the global refugee population and their particularly high recognition rates.⁸

For the purpose of this study, permits are considered as any first-time authorization issued by a receiving country to lawfully allow a foreign national to enter the country for family reunification, work or study purposes. Moreover, the report includes some figures on admissions via sponsorship pathways where available. Data are collected directly from OECD member countries and Brazil based on first-time permits issued during the 2010–2022 period. Following from the above definition, the data do not cover recognized refugees, asylum-seekers, or other individuals already residing in the country.⁹

The figures presented in this report are indicative of refugee admissions through complementary pathways, with a few caveats. First, while

representing the widest-ranging data collection effort on complementary pathways admissions currently available, the coverage of this report remains selective in terms of countries and populations captured. Following from the focus on the seven nationalities listed above, several other nationalities with large global refugee populations are not captured in this report. In particular, South Sudan, Myanmar, the Democratic Republic of the Congo, Sudan and the Central African Republic have refugee populations of over half a million people,¹⁰ exceeding the refugee populations of some of the nationalities chosen for this report.¹¹ Ongoing work seeks to expand coverage to include further key refugee populations in future editions of this report.

Data were available for a total of 38 countries, including all OECD countries except for Türkiye, plus Brazil. The unavailability of comparable data for Türkiye is an important source of undercoverage, as Türkiye is a key host country for refugees from Syria, Afghanistan, Iraq and Iran (four out of seven nationalities covered under the current report).¹² With the exception of Brazil, non-OECD countries—including some major refugee hosts—also fall outside the scope of coverage in this study.

The report aims to reflect individuals in need of international protection admitted to an OECD country and Brazil for the purposes of family reunification, employment or education, following an initial stay in a first country of asylum where

8 See previous report “Safe Pathways for Refugees III (OECD-UNHCR 2023)” for more details.

9 For more information on types of permits covered, please refer to “Safe Pathways for Refugees III (OECD-UNHCR 2023)”.

10 Source: UNHCR Refugee Data Finder (2024)

11 Ukrainian nationals, who fled since 2022 and are beneficiaries of the EU’s Temporary Protection Directive (Council Directive 2001/55/EC) in Europe and similar schemes in other OECD countries, are also not covered by this analysis.

12 In 2021, Türkiye was host to 61 per cent of the combined population of refugees from the seven countries of origin receiving 16 per cent of new asylum applications from the seven nationalities to OECD countries between 2010 and 2022 (UNHCR 2024).

they sought protection. However, government statistics on first-time residence permits or other administrative data sources in general do not enable refugees, persons in a refugee-like situation or persons with a refugee background to be identified unless they hold an asylum or humanitarian-related permit.¹³ The figures presented in this report may therefore include people who were admitted directly from one of the seven countries of origin (Afghanistan, Eritrea, Iran, Iraq, Somalia, Syria, Venezuela) and thus may not have crossed an international border to meet the definition of a refugee prior to arrival in an OECD country.

Given the high asylum recognition rates of nationals from the seven countries of origin considered (see Annex V for details), it can however be assumed that a large number of individuals covered in this study would have a well-founded refugee claim.

Further, this data collection exercise focuses on first-time permits granted, excluding permit renewals or status changes in the destination country to avoid double-counting individuals in the data. Nevertheless, double-counting may occur in a few cases where the renewals and status changes could not be extracted from a country's permit data (see Annex I for details). Further, a few countries count native-born

children of foreign nationals under the residence permit of their parents, although to our knowledge this is not likely to lead to a large overestimation.

The definitional focus on first permits issued for entry into the host country excludes individuals who obtain a visa or status regularization following their entry into the country—which is notably the case for a large population of Venezuelans residing in Chile and Colombia. Finally, while data availability improves year to year, some gaps remain for specific country-year figures, but these represent a relatively small percentage of undercoverage.

The figures in this report are based on the latest available data in each reporting country. As a result, some past figures have been revised compared to prior editions of this report, reflecting changes in the source data due to new information becoming available, corrections, and/or changes in reporting systems. To ensure accuracy, we recommend relying on the latest available edition of the report, noting that previously published time series are not always comparable.

In addition to the above summary, Annex I provides a detailed description of the compliance of the data collected with definitions by permit type and host country.

“ Envisioning refugees as reservoirs of talent and opportunity, rather than merely vulnerable individuals, has been the cornerstone of my work. [...] It's crucial to remember that labor mobility is an additional, not exclusive, support mechanism. Labor mobility complements, not replaces, broader refugee support and protection, urging us to innovate and avoid oversimplifying the refugee experience. ”

Mustafa, refugee advocate in Canada

¹³ For further information, please see the definitions and concepts contained in the 2018 [“International recommendations on refugee statistics”](#), prepared by the Expert Group on Refugee and Internally Displaced Persons Statistics.

4 Analysis of admission trends

Over the 2010–2022 period, a combined total of over 5.8 million new asylum applications¹⁴ were submitted in OECD countries and Brazil by nationals of Afghanistan, Eritrea, Iran, Iraq, Somalia, Syria and Venezuela. In the same period, ca. 2.1 million first-time residence permits were granted by OECD countries and Brazil to nationals of the seven countries for reasons related to family, work, or education, including ca. 215,000 in 2022 alone.

An additional ca. 26,000 individuals were granted entry via named sponsorship schemes, which benefitted a total of 170,000 individuals from the seven nationality groups between 2010 and 2022. Over the same period, about 2.9 million individuals of the seven nationalities were

recognized as refugees or granted a subsidiary form of protection,¹⁵ and 710,000 persons from the seven populations concerned arrived in OECD countries¹⁶ and Brazil through resettlement programmes.

The overall figures for 2022 were remarkably high in both relative and absolute terms. The nearly 215,000 new permits issued represent an increase of 38 per cent compared to the previous year, marking the largest year-on-year growth yet within the period of analysis. The resulting figure surpassed pre-pandemic levels to reach the highest number of issuances since 2017 and the second-highest yearly number within the overall period of analysis.

4.1 By type of permit

Family reunification continues to be the single most important complementary pathway, representing 57 per cent of all new permits issued in 2022 and 63 per cent of all permits issued between 2010 and 2022 for the seven nationalities in OECD countries and Brazil. By comparison, work- and study-based permits represented 21 per cent each in 2022. Looking at the overall period (2010–2022), a total of over 1.32 million family permits, 394,000 student permits, and about 378,000 work permits have been issued in OECD countries and Brazil to nationals of the selected seven countries.

Family permits have represented the majority of permits issued throughout the timeframe studied, but were particularly prominent in the years following 2015. Despite their continued high volume, the relative share of family permits among the three permit types has been generally decreasing since its 2017 peak, except for a temporary surge in 2020 during the special circumstances of the COVID-19 pandemic. The figures for 2022 confirm the longer-term downward trend in the share of family-based permits due to a faster growth in the number of work and study permits issued over the year.

FIGURE 2 | Work, study and family permits issued each year for selected nationals in OECD country and Brazil, by type (2010–2022). (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

A total of over 123,000 new family-based permits were issued for the seven nationality groups in OECD countries and Brazil in 2022.

This represents a significant 30 per cent increase compared to 2021 and marks the highest yearly number of family permit issuances since 2018. In 2022, OECD countries received an estimated total of 5.4 million new permanent migrants, of which about 1.6 million were family-related (excluding family members of foreign workers) (OECD, 2023). The seven populations mapped for this exercise therefore accounted for nearly 8 per cent of all family permits issued by OECD countries for family reasons in 2022.

While still relatively smaller in numbers, issuances of work and study permits have been increasing quickly. Work permits, in particular, have surged by a remarkable 68 per cent in 2022. Student permits increased by 36 per cent compared to the previous year. Both work and study permits counted around 46,000 issuances each in 2022, which is a record figure for both within the

2010–2022 timeframe. The new work and study permits delivered to the seven populations in 2022 amounted to ca. 4 and 2 per cent, respectively, of the total number of work and study permits delivered by OECD countries that same year (OECD, 2023).

A few specific flows played a major role in the above increases within particular categories. The growth in family permits was shaped particularly by increases in the number of family permits issued by the United States (especially for Iranians), Colombia (Venezuelans), Germany (Syrians), and Chile (Venezuelans). The surge in labour permits was driven primarily by work permits issued for Venezuelans in Colombia (which alone accounted for 37 per cent of the overall increase), and, to a lesser extent, work permits for Iranians in Canada and Venezuelans in Spain. Finally, the increase in student permits was driven primarily by Iranians in the United States, the UK, and Italy, as well as by Venezuelans in Colombia.

FIGURE 3 | Trends in total new issuances by year and permit type (2010–2022) (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

A CLOSER LOOK AT SPONSORSHIP AS A COMPLEMENTARY PATHWAY

In the context of complementary pathways, named (also known as nominated or private) sponsorship refers to programmes that allow individuals, groups of individuals, or organizations to directly engage in refugee admission efforts, by identifying, selecting and supporting the entry and stay of nominated individuals, not referred by UNHCR. Like other complementary pathways, a named sponsorship pathway is therefore distinct from UNHCR resettlement. Community sponsorship programmes that support resettled refugees after arrival in a third country, while an important initiative to growing inclusive and welcoming societies, do not qualify as a complementary pathway.

Australia and Canada, two OECD countries for which comparable sponsorship data were available, have both the framework for community sponsorship as well as well-established named sponsorship programmes. The below figure shows a snapshot of their accomplishments in facilitating sponsorship arrivals for Afghans, Eritreans, Iranians, Iraqis, Somalis, Syrians, and Venezuelans. From 2010 to 2022, individuals of these seven nationalities received over 130,000 sponsorship permits by Canada and 40,000 by Australia, for a total of over 170,000 sponsorship permits.

In 2022, the two countries issued a total of nearly 26,000 sponsorship permits, which is the highest number of any year in the 2010–2022 period. This constitutes a huge (+135 per cent) increase compared to 2021, driven overwhelmingly by a surge in issuances by Canada (23,000 sponsorship permits in 2022, +149 per cent vs. 2021). It is not clear yet whether or how much of this surge is driven by backlogs formed during the COVID-19 pandemic, but the sheer scale of the increase suggests a potential longer-term increase.

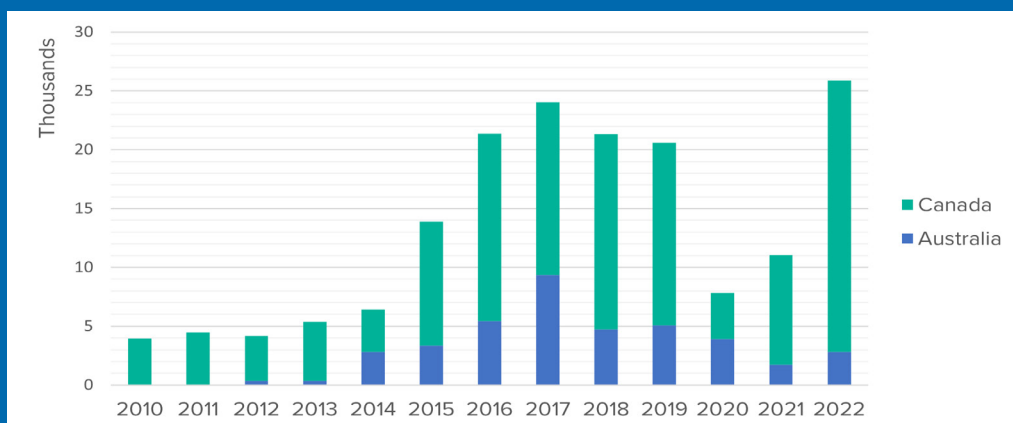

FIGURE 4 | Permits issued via named sponsorship schemes, 2010–2022 (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

In the overall period (2010–2022), Syrians received the highest number of sponsorship permits (45,800), followed by Iraqis (45,100), Eritreans (34,700), Afghans (25,200), Somalis (9,200), Iranians (2,300) and Venezuelans (13). That said, in 2022 Afghans received the most sponsorship permits (8,300); the sharp increase in permits from 2021 (2,000) to 2022 is likely linked to the takeover of the Taliban. Permits for sponsorship pathways are the highest among Syrians, Iraqis and Eritreans, and thus trends differ from the general trends observed for education, employment and family reunification permits, which Iranians and especially Venezuelans have comparatively accessed in greater numbers.

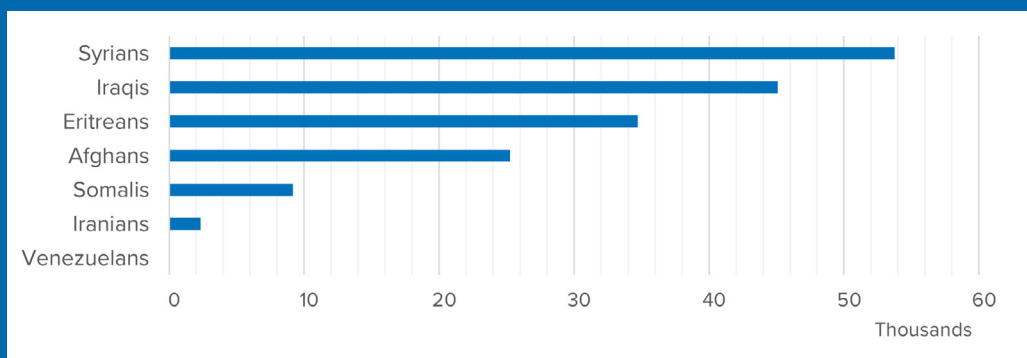

FIGURE 5 | Total named sponsorship permits received by nationality, 2010–2022 (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

4.2 By destination country

Considering the 2010–2022 period as a whole, the top destination countries for complementary pathways, as measured by the number of permits delivered to nationals of the seven origin countries observed, were Germany (342,000), the United States (337,000), Sweden (242,000), Canada (230,000), and the United Kingdom (161,000).

Looking at 2022, the top destination countries for recipients of work, study, and family reunification permits among the seven studied nationalities were Germany (ca. 40,000), Canada (29,000), the United States (24,000), Colombia (22,000), and the United Kingdom (15,000).

In Colombia, the number of permits issued more than tripled compared to 2021 (+253 per cent), resulting in the largest absolute increase over the year among the countries studied (+16,000 new permits). Further large absolute

increases in the number of permits issued over the year also occurred in the United States (+12,000), where the number of issuances almost doubled compared to 2021 (+97 per cent), as well as Germany (+9,000, i.e., +30 per cent). While for most destination countries the number of permits issued increased from 2021 to 2022, there were also some decreases, most notably in Sweden (-2,900, i.e. -22 per cent) and Mexico (-500, i.e. -19 per cent).

With the exception of the United States and Colombia, some of the largest relative increases in permit issuances over the year (2022 vs 2021) occurred among less prominent destination countries such as Chile (+3,500, from 0 comparable permits in 2021), Japan (+1,600 new permits, for a change of +496 per cent), New Zealand (+1,500, +321 per cent), and Portugal (+1,100, +111 per cent).

FIGURE 6 | Total permit issuances by destination country in 2021, 2022, and over the entire 2010–2022 period. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

Note: for graph readability, destination countries with fewer than 1,800 permits issued in 2022 are not shown.

Note: Some minor data gaps occur for selected countries; see Annex I for full notes.

Figure 7 provides a closer look at recent trends for some of the top destinations overall (including the top seven countries of 2022). In 2022, Germany was the top issuer of work, study and family permits for the seven observed countries of origin for the third consecutive year. The main recipients were Syrians. Aside from a dip in 2019, Germany has been the number one destination among the countries observed since 2016. Since 2020, Germany's yearly permit issuances have been increasing at a quick pace, surpassing the second top destination in 2022, Canada, by 37 per cent (with ca. 40,000 vs 29,000 permits, respectively).

Canada's annual permit issuances in 2021 (25,000) and 2022 (29,000) indicate a recovery from the drop of 2020 (10,000) and return to its previous trend of steady growth since 2017. In doing so, it reached its highest number of issuances yet (considering the 2010–2022 period). As the second top destination country since 2021, Canada remained the fourth top destination for the overall period.

In 2022, the United States (24,000) broke a negative seven-year trend and exhibited its largest year-on-year increase yet observed (+97 per cent), reaching the highest number of yearly issuances since 2017 (29,000). As a result, it jumped to third place among top destinations

in 2022, from fifth in 2021. Considering the overall period, it remained the second top destination.

Colombia (22,000) exhibited the highest absolute increase in issuances over the year 2022 (+16,000) of all countries observed, making the country the top fourth destination in 2022 and the seventh overall. The United Kingdom (15,000) maintained its record-level issuances in 2022 and even slightly increased on them, keeping the fifth spot in the overall timeframe. Spain (14,000) neared pre-2020 levels after a considerable increase (+50 per cent) in issuances during 2022. Finally, Sweden (10,000) continued its gradually decreasing trend for the fifth consecutive year, dropping to seventh place in 2022 but remaining the third main destination overall.

Increases in permits to Venezuelans were the main driver behind the overall jump observed for Colombia, Spain, Chile, and, to a more moderate extent, the United States. Interestingly, permits issued to Venezuelans decreased in 2022 in Mexico and Costa Rica. Meanwhile, increases in permits to Iranians were the primary drivers behind the increase in issuances observed for Canada, the United States, and the United Kingdom. The following section discusses trends by nationality of permits recipients in further detail.

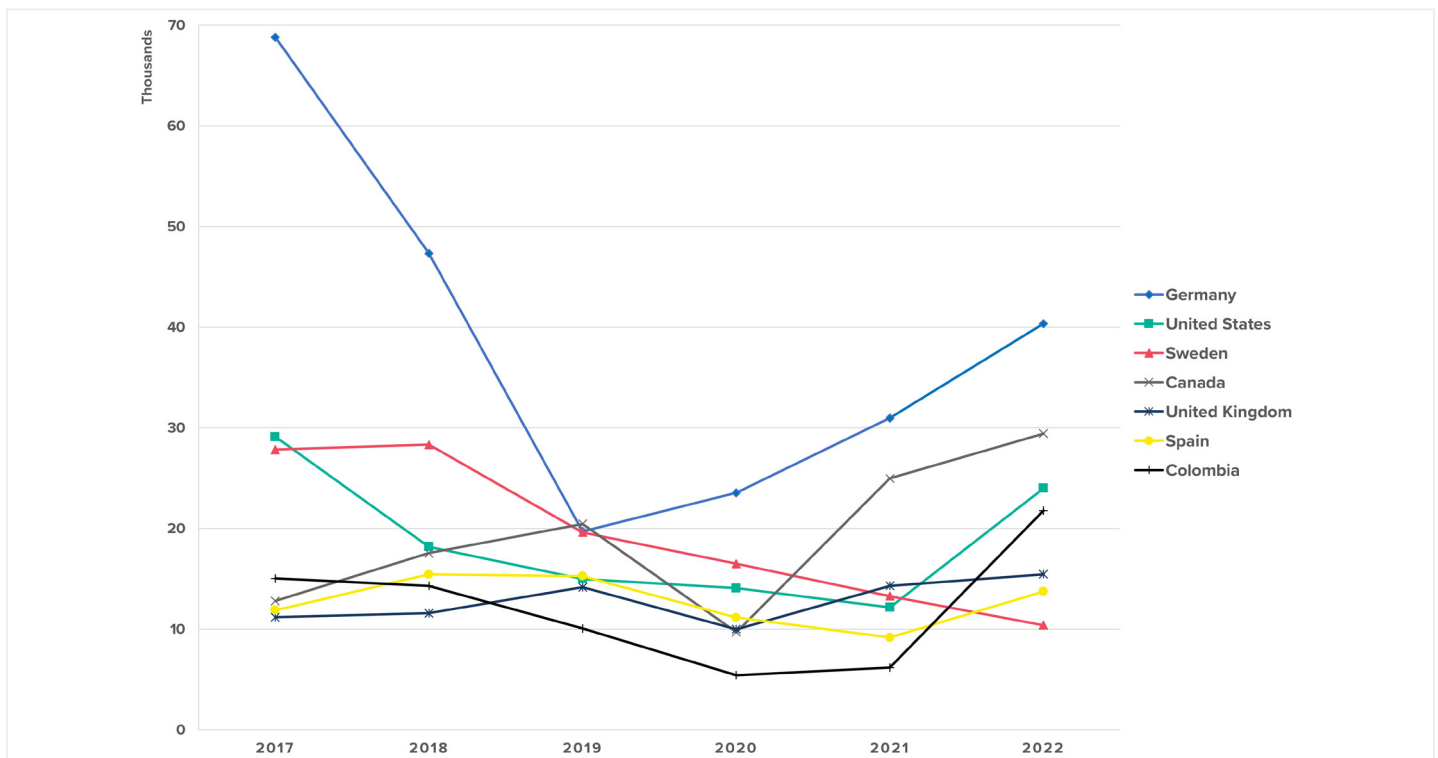

FIGURE 7 | Trends among top seven destination countries, 2017–2022 (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

4.3 By population

While comparing the available data for all seven populations, we notice that Iranians (74,000) were issued the highest number of family, study and job permits followed by Venezuelans (55,000), Syrians (36,000), Afghans (22,000) and Iraqis (15,000). Eritreans and Somalis were provided with 8,000 and 5,510 permits respectively for the reporting year. In comparison to 2021, most populations, aside from Somali and Eritrean nationals, saw a rise in the total number of permits.

First-time permits issued for family purposes remain the top permit category for six of the seven populations with the exception of Iranians, for whom study permits represent the top category. For the other six populations, family permits make up more than half of the total permits, ranging from 51 per cent for Venezuelans

to over 90 per cent for Eritreans and Somalis. Venezuelans were granted the highest number of permits (21,000) for labour purposes in 2022, more than double the 2021 figure. Labour permits for Iranians also increased significantly (14,000 to 20,000), making them the second-highest recipients of labour permits.

During the 2010–2022 reference period, the total permits offered by OECD countries and Brazil for education, work and family purposes to the seven nationalities were as follows: Iranians (556,000), Venezuelans (510,000), Syrians (434,000), Iraqis (213,000), Afghans (183,000), Somalis (102,000) and Eritreans (98,000).

In the following sub-sections, we will take a closer look at each nationality and highlight key trends for the reporting year 2022.

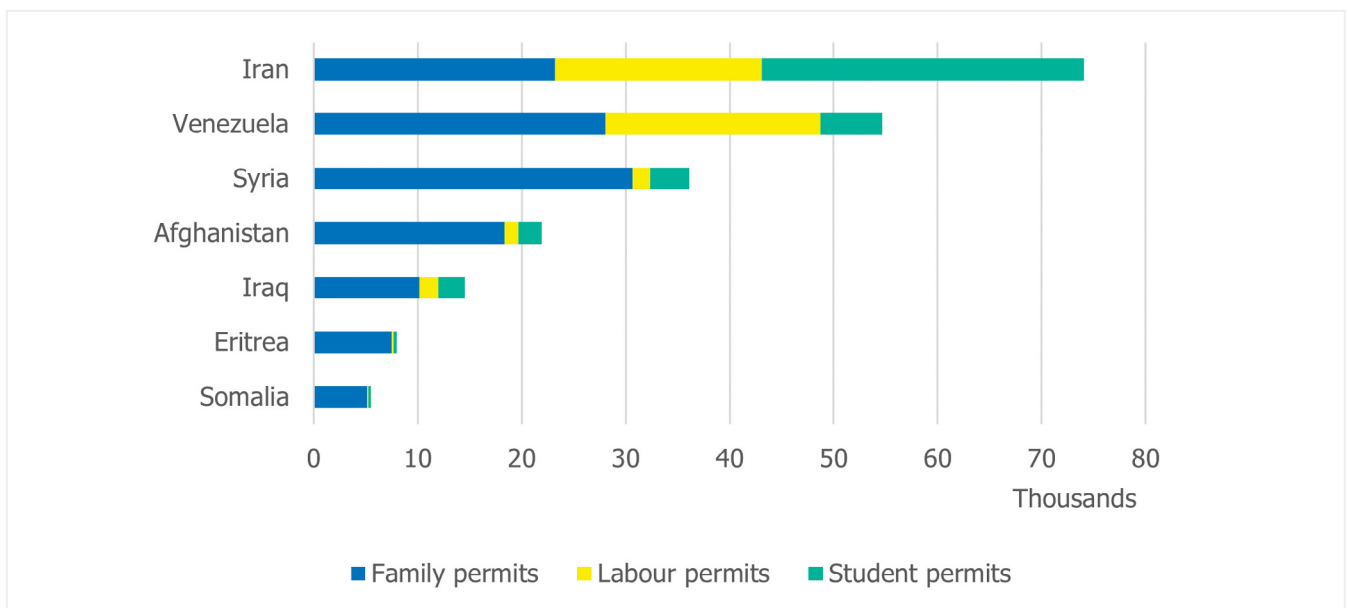

FIGURE 8 | Overview of family, labour and student permits for the seven nationalities in 2022. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

IRANIANS

In 2022, a total of 74,000 permits were issued to Iranians by OECD countries and Brazil for study (42 per cent), family (31 per cent) and work (27 per cent) purposes. This marks a significant increase compared to the previous year when 55,000 were granted, following a noticeable spike after the COVID-19 pandemic. It should be noted that Iran is the only population where student permits are the top category of permit issued.

Canada ranked as the top destination country for Iranians with a total of 21,000 permits issued, out of which 10,000 were for labour purposes and 9,000 for study purposes. The US issued the second-highest number (9,800). Nevertheless, the majority of permits for Iranians were issued by countries in Europe (50 per cent), with Germany (9,600 permits) and the United Kingdom (6,900) ranking among the top five destination countries for this nationality group for 2022.

Large-scale protests erupted in Iran after the death of Mahsa Amini in September 2022, leaving hundreds of protestors killed and thousands imprisoned.¹⁷ Despite the challenging context in Iran, asylum recognition dropped to 14,100 from 16,400 in 2021. The refugee population numbers of Iranians (116,000 in 2022 vs. 135,900 in 2021) recorded a decline after increases in 2020 and 2021 in OECD countries and Brazil.

FIGURE 9 | Overview of permits provided to Iranians (2010–2022) from OECD countries and Brazil. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

17 For more information, see <https://www.hrw.org/world-report/2023/country-chapters/iran>.

VENEZUELANAS

OECD countries and Brazil granted 55,000 first-time entry permits for Venezuelans in 2022. After a significant drop in permit figures in 2020, most probably related to COVID-19 pandemic restrictions, the 2022 figures almost equal the peak number of permits issued to Venezuelans in 2018 (56,000).

As for most nationalities included in this report, family permits were the top category for Venezuelan nationals, although with a more balanced distribution, with family permits representing 51 per cent, while 38 per cent of the permits were offered for work purposes and 11 per cent for study reasons. All permit types marked an increase in comparison to 2021, with labour permits recording their highest number since the start of the data collection in 2010. Colombia was by far the top destination country for Venezuelans in 2022, offering 22,000 permits compared to 12,000 permits granted by Spain, the second top destination country for the reporting year. The United States, Chile and Mexico also rank among the top five destinations for this nationality.

In terms of the political context, 2022 marked a shift in the regional dynamics, with many host countries either restoring their diplomatic relations or moderating their rhetoric towards the country's government. The economy started to show signs of growth, which were counteracted by rising inflation and a reduction in remittances. While there have been slight increases in spontaneous return movements, cross-border displacement and mixed movements persist from Venezuela.¹⁸ The total number of Venezuelan nationals recognized as refugees in 2022 in OECD countries and Brazil increased to 219,100 individuals while the total number of Venezuelans benefitting from other legal status while retaining their international protection needs was reported at 3.2 million. The asylum recognition figure for Venezuelans in 2022 was 36,700.¹⁹

FIGURE 10 | Overview of permits provided to Venezuelans (2010–2022) from OECD countries and Brazil. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

¹⁸ For more information, see <https://reporting.unhcr.org/sites/default/files/2023-06/AME%20-%20Bolivarian%20Republic%20of%20Venezuela%2%A0%2%A0.pdf>.

SYRIANS

In 2022, 36,000 permits were provided by OECD countries and Brazil to Syrian nationals, recording a significant increase compared to 2021 numbers (29,000). The number of permits granted to Syrian nationals has been steadily rising since 2019 but continues to remain far below the numbers recorded in 2017 (82,000) and 2018 (52,000). The majority of permits in 2022 (85 per cent) were issued for family reasons, with student permits making up 10 per cent of total permits. It should be noted that 2022 saw the greatest number of student permits (3,700) and work permits (1,700) in the last five years for this nationality. Germany remained the main destination country for Syrian nationals (with 20,000 permits issued compared to 15,000 permits in 2021), followed by the Netherlands, which provided 3,100 permits, almost entirely for family reasons.

In 2022, the situation in the country deteriorated due to economic hardships linked to the COVID-19 pandemic, rising inflation, hikes in fuel prices and other factors. For the first time, Syrians living across every sub-district in the country experienced some degree of humanitarian stress.²⁰ In 2022, 104,500 asylum applications were approved and the total Syrian refugee population equalled approximately 4.5 million in OECD countries and Brazil. Given that Syria remains one of the largest and ongoing displacement crises globally, the need to provide access to legal and safe pathways for this nationality remains high.

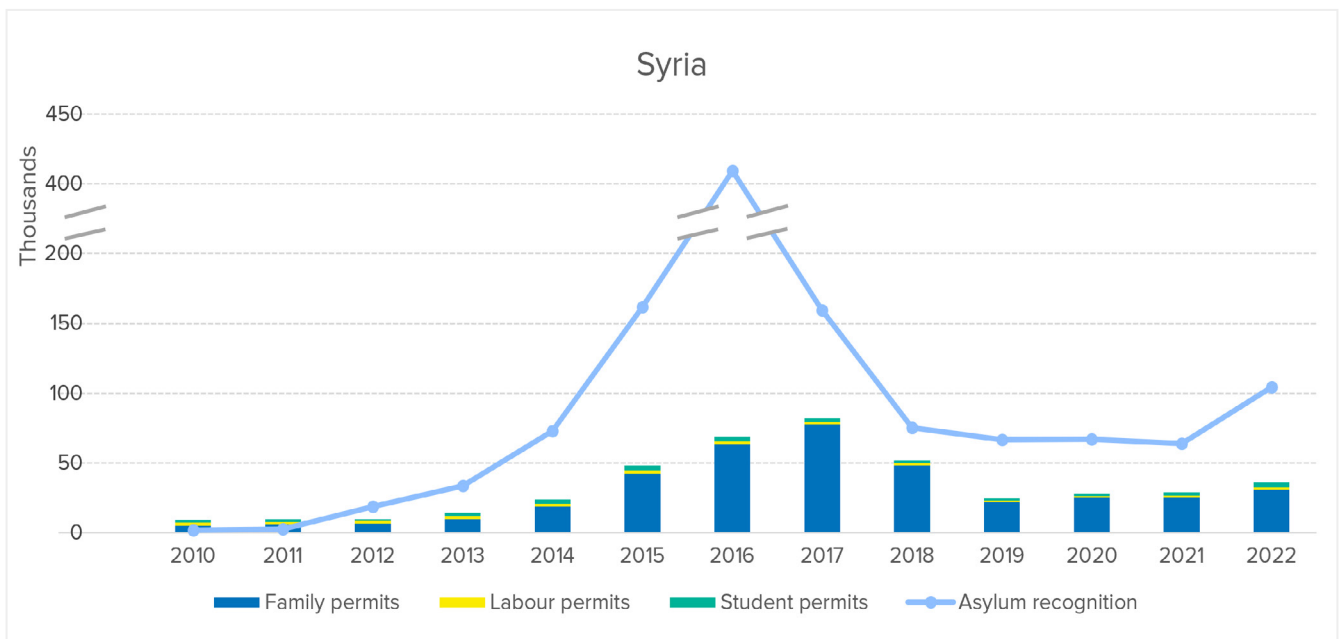

FIGURE 11 | Overview of permits provided to Syrians (2010–2022) from OECD countries and Brazil. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

IRAQIS

First-time permits issued to Iraqi nationals by OECD countries and Brazil equalled 15,000 in 2022. Although this marks an increase compared to the previous year, this was only by a small number and did not quite reach the pre-COVID-19 pandemic levels of 2019 (15,000). The United Kingdom (3,000 permits), Germany (2,600 permits), Sweden (2,000 permits), the United States (1,900 permits) and Canada (980 permits) were the top five countries of destination for Iraqis. Family permits remained the main category of permit granted to Iraqis (70 per cent compared to 17 per cent for study and 12 per cent for work visas).

In 2022, the political instability remained a challenge as after almost a year of political gridlock following parliamentary elections, a new government was formed in October 2022.²¹ The security situation remained volatile, with recorded sporadic attacks by extremist groups and some regional tensions. Some improvements in the overall economic situation of the country have been noted due to oil revenue increases. The total number of Iraqi refugees was 217,200 persons in OECD countries and Brazil, recording a decline compared to 2021 (202,800), and marking the lowest number in the last five years. A total of 16,700 Iraqis were granted asylum in 2022.²²

FIGURE 12 | Overview of permits provided to Iraqis (2010-2022) from OECD countries and Brazil. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

22 Source: Refugee Data Finder

AFGHANS

In 2022, first-time entry permits issued to Afghans for family, work and study purposes equalled 22,000. This number marks the highest number of permits issued for this nationality from 2010, with all permit types recording their highest number from the start of the reporting in 2010. The increase is likely linked to the instability after the Taliban took power in Afghanistan in August 2021. Family permits constituted 84 per cent of the total figure, with student permits representing 10 per cent and job permits making up 6 per cent of the number. The highest number of permits were provided by Germany (5,000) and the United States (2,200) both of which marked an increase compared to 2021; on the other hand, the United Kingdom recorded a decline in permits (1,900 vs 3,000) dropping from the first place in 2021 to the fourth place in 2022.

The context in Afghanistan remained dire in 2022, with the country facing complex humanitarian and socio-economic needs, terrorism-related insecurity, severe natural disasters and climate challenges, food insecurity and economic instability.²³ The number of refugees surged at 5.7 million, doubling 2021 figures, and 458,800 refugees were in OECD countries and Brazil by end-2022, increased from 397,000 by end-2021. A total of 99,700 asylum applications were approved in the reporting year, the highest number of all five previous years.

FIGURE 13 | Overview of permits provided to Afghans (2010–2022) from OECD countries and Brazil. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

SOMALIS

In 2022, a total of 5,510 permits were issued to Somali nationals by OECD countries and Brazil, almost exclusively for family purposes (93 per cent), with study and job permits representing only 5 and 2 per cent respectively. The total number of permits granted is at the same level to the previous years of 2021 (5,500) and 2020 (5,300). Somali nationals received the greatest number of permits in 2022 from Germany (1,300), Canada (800), the United States (800), the United Kingdom (480) and Finland (440).

In May 2022, the formation of the new government and the peaceful transition of presidential power improved the political context in Somalia, although the country continued to face a volatile security situation, especially after the escalation of military offensive by the Federal Government of Somalia (FGS) against Al Shabab (AS) in Hirshabelle and Galmudug during the last quarter of the year. In addition to a long-standing conflict, severe drought has plagued Somalia in the last years, contributing to displacement.²⁴ Approximately 12,000 Somalis were granted asylum in this reporting year, showing a significant increase from 2021. The population of Somali refugees was 93,000 in 2022,²⁵ a decrease from 2021 (101,000) in OECD countries and Brazil, while the number of Somali refugees in all countries for the entire duration of the report's coverage (2010–2022) has increased from 777,000 in 2021 to 787,000 in 2022.

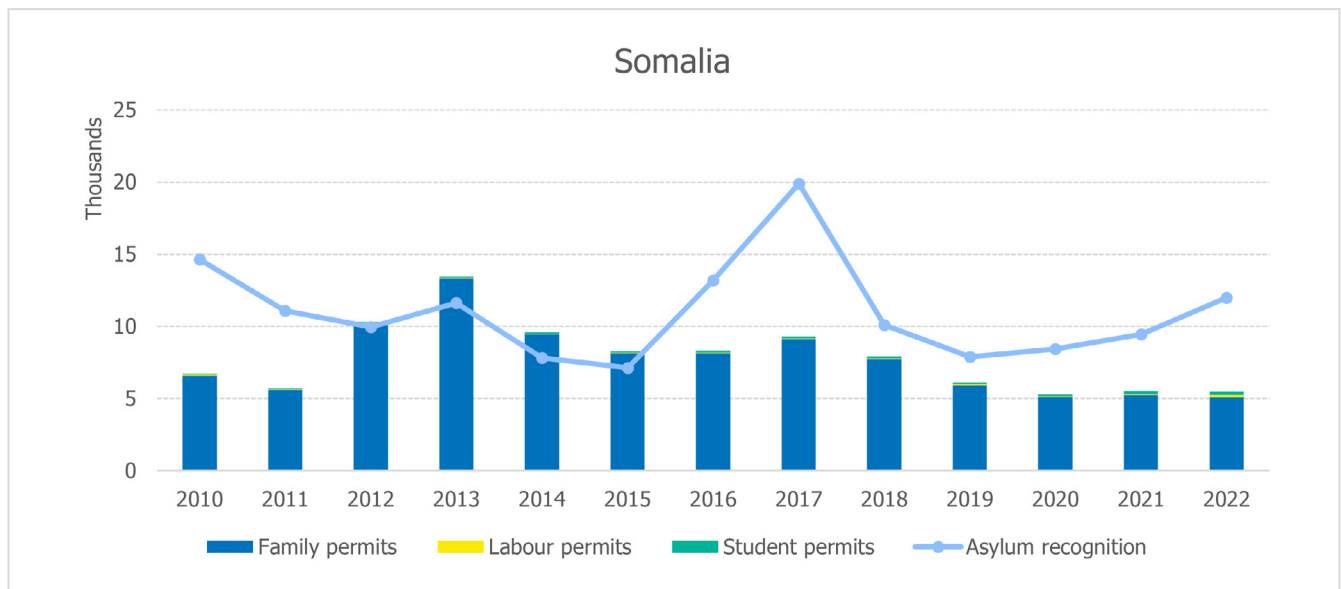

FIGURE 14 | Overview of permits provided to Somalis (2010–2022) from OECD countries and Brazil. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

ERITREANS

During the year of 2022, OECD countries and Brazil issued 8,000 first-time permits for family, work and study purposes. Similar to the previous year, the overwhelming majority of permits were granted for family purposes (94 per cent) with work and study permits making up 2 and 4 per cent respectively. Looking more closely at the destination country distribution, Canada became the top destination country for Eritreans (1,300) followed by Sweden (which dropped from the first place, issuing 2,000 permits in 2021 vs 1,300 in 2022), Germany (1,200), the United Kingdom (970) and the Netherlands (900).

Forced military conscription in Eritrea intensified in the second half of 2022, following the outbreak of conflict in Ethiopia in November 2020, when fighting ensued between the Tigray People’s Liberation Front (TPLF) against the Ethiopian and Eritrean government forces.²⁶ Total refugee populations remained at similar levels with the previous year (511,900), with 512,700 being the highest population number recorded in the last five years (with the exception of 2020), whereas the number of Eritrean refugees has decreased in OECD countries and Brazil from 205,400 to 187,400. The asylum recognition rate rebounded to 12,300 after a significant drop in 2021 to 11,800 but is still significantly lower than the previous years.²⁷

“ Education for refugees isn’t just about knowledge; it’s a lifeline to opportunity, dignity, and rebuilding shattered lives. To governments and universities, open doors, offer scholarships, and bridge language gaps. Refugees are not burdens, but resilient talents ready to enrich your communities. Remember, education isn’t a privilege; it’s a human right, especially for those who’ve lost everything but their hope. Let’s work together to rewrite their stories, not just with words, but with the transformative power of education. ”

Bella, refugee student in the UK

5 Recommendations to States to improve data collection on complementary pathways for admission

The data provided by OECD countries and Brazil indicate the status of study, work, and family reunification permits, along with a look at sponsorship pathways, available for the seven nationalities selected. This information can inform decision-making and planning around complementary pathways and family reunification especially in the follow-up of the 2023 Global Refugee Forum (GRF). Of note, a number of diverse actors joined together in whole of society approach around pledges at the 2023 GRF, including multi-stakeholder pledges to support access to labour mobility, education pathways, family reunification, machine-readable travel documents, and sponsorship.

The below recommendations will be relevant to the pledge stakeholders and beyond as we collaborate around these joint commitments in preparations for the [High-Level Officials meeting in 2025](#) and to achieve the goals and objectives under Roadmap 2030 and the Global Compact on Refugees.

To further improve the available data, we provide the following suggestions and best practices for States:

- ✓ **Differentiating between initial permits, permit renewals and status changes** can help avoid overcounting issues.
- ✓ **Disaggregating data by sex and age** can support identifying and monitoring trends, including tracking gender parity and helping to support wider inclusion.
- ✓ **Differentiating country of birth and citizenship as two separate categories** can improve the recording of situations where these two categories may be different to allow for more accurate reporting.
- ✓ **Clearly indicating the type of travel document used** in each case can help better assess how different types of travel documents including Convention Travel Documents, one-way travel documents, passports, etc. facilitate travel and access to permits.
- ✓ **Including the country of residence and legal status in said country of the applicant** in data collection helps better pinpoint migration paths and evaluate the potential impact of legal status types on access to permits.
- ✓ **Improve efficiency in compiling data** to reduce information lags and ensure the accuracy of the data collection by addressing data limitations and correcting any errors.
- ✓ **Consider joining the multi-stakeholder pledges developed in the context of the Global Refugee Forum** which support [skills-based pathways](#), [family reunification](#), [refugee travel documents](#) and [sponsorship pathways](#), and share relevant best practices on the [Global Compact for Refugees site](#).
- ✓ **Consider participating in the “Safe Pathways for Refugees” project**, following the example of Brazil that proactively expressed its interest to join the study that targets mainly OECD countries. To express your willingness to join the study and contribute to strengthening the evidence base around access to complementary pathways and family reunification, please contact OECD and/or UNHCR.

6

Conclusion

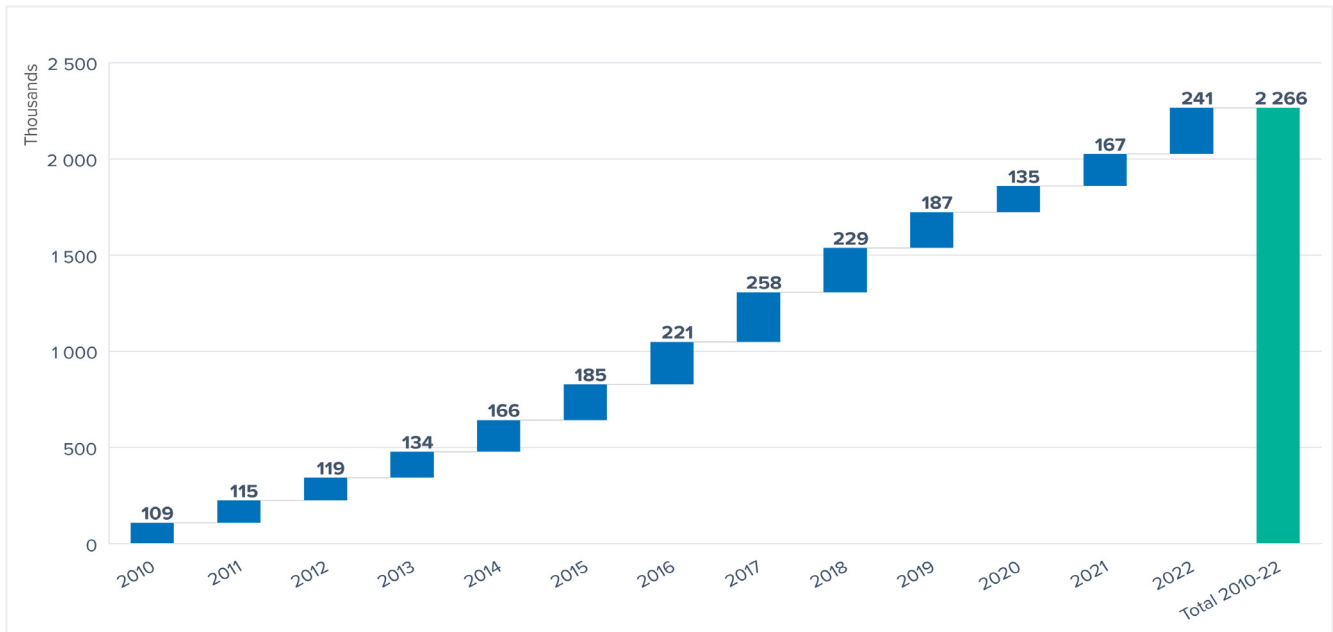

FIGURE 16 | Overview of all permits issued (2010–2022) from OECD countries and Brazil. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

With approximately 2.1 million individuals from the seven nationalities covered in the report accessing family, work and education permits to OECD countries and Brazil between 2010–2022, this document shows how safe skills-based pathways and family reunification can help connect individuals with international protection needs to solutions. The available data on named sponsorship is also promising and when combined with work, family and education permits, it shows that almost 2.3 million individuals from the seven nationalities have accessed permits to OECD countries and Brazil over the reporting period.

Notably, family permits account for the largest number of permits overall. Given the rights-based nature of family reunification, it is encouraging to find that it remains the most relied upon third country solution. Nonetheless, restrictive legal frameworks and practices, including strict documentation requirements, minimum income thresholds, short application deadlines and in-person procedural elements, continue to limit access to family reunification for many refugees. To remove the hurdles, state policies facilitating

family reunification need to be evidence-informed, protection-centred and sufficiently flexible. Local, regional and international service providers also play a role in assisting access to reliable information and providing holistic practical and legal support throughout the process. Collectively, the international community can help many more refugee families to effectively exercise their right to family unity.

In 2022, a total of 215,000 permits were issued for family, work and educational purposes to persons who are likely in need of international protection from the seven nationalities studied. To put this in perspective, this number exceeds by a 3:1 ratio the total number of resettlement departures recorded in 2022 (78,000). While complementary pathways expand access to progressive solutions, the significance of resettlement as a key protection tool for refugees is vital and must be preserved.

The 2022 figures (240,700) from this report have outnumbered the global target of 180,000 forcibly displaced individuals admitted through legal pathways set for the year in the 2030 Roadmap and constitute significant growth (+44 per cent)

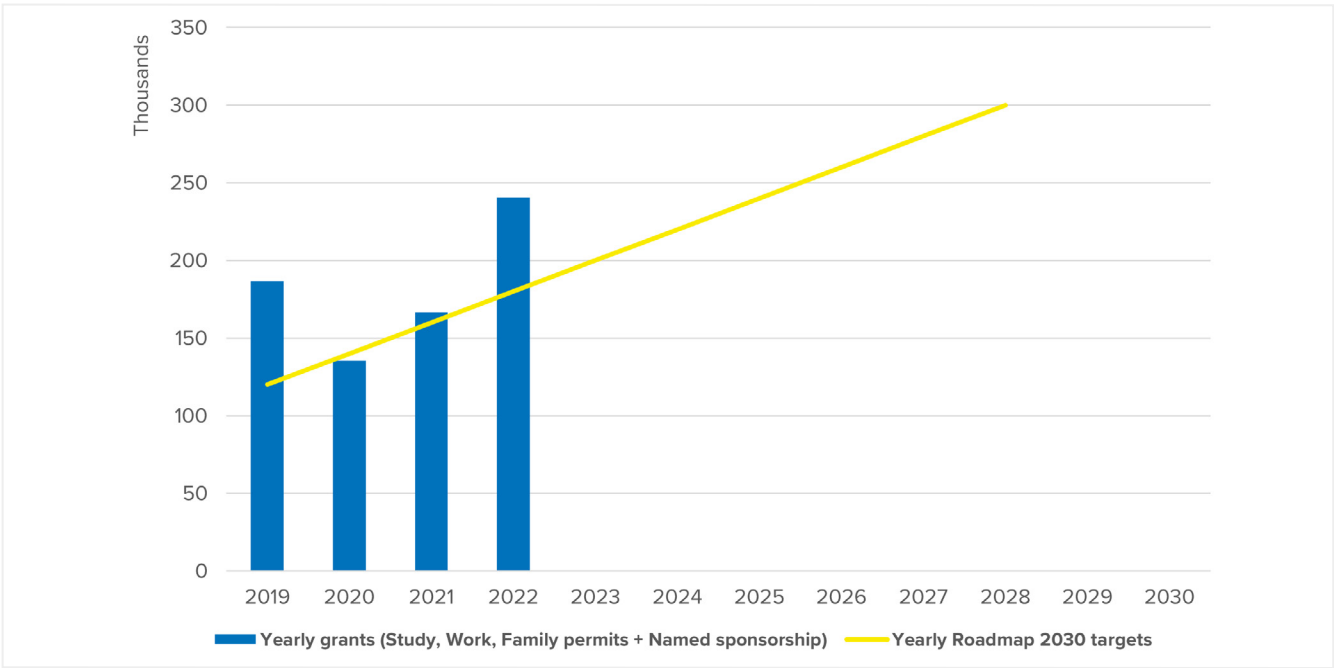

FIGURE 17 | To achieve the third GCR objective, the Roadmap 2030 lays out the goal that 2.1 million refugees access complementary pathways from 2019 to 2030. This figure shows the first-time family, study, work and sponsorship permits provided to the seven nationalities to Brazil and OECD countries covering 2019–2022. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

compared to 2021. A total of 730,800 permits have been issued between 2019 and 2022 (years covered by the Roadmap), which indicates that we have achieved 35 per cent of the overall 10-year target. While these are proxy variables given the limitations of the report, the numbers are truly encouraging, and with more systemic inclusion of refugees into legal pathways more people would have access to meaningful skills-based opportunities and family reunification.

Having said that, strong efforts need to be maintained in order to achieve the 2.1 million target by 2030, especially given the decline noticed in 2019 and exacerbated in 2020 during the COVID-19 pandemic. To achieve this objective, a whole-of-society approach is important;

governments, international organizations, NGOs, refugee-led and diaspora groups, academia all need to engage in this effort. The fulfilment of the pledges made in the 2023 Global Refugee Forum would also be crucial towards the same direction. Skills-based permit figures continue to be on the rise after a decline in 2020 and have recorded their highest number since the start of this data collection exercise in 2010 (91,500). Even though these continue to be modest numbers in comparison to permits issued for family reasons, this is an encouraging development. In order to see these numbers continuing to increase, the international community needs to work on eliminating the challenges preventing talented and skilled refugees from relocating to work or study. High relocation costs, strict documentation

FIGURE 18 | Cumulative progress towards the 2030 Roadmap goal. (For a comprehensive overview of the report data, please see the [interactive dashboard](#)).

requirements and lack of prior experience and qualification recognition often block refugee applicants from securing a scholarship or a work opportunity in another country. The lack of machine-readable travel documents for refugees including but not limited to the Convention Travel Documents that can facilitate travel similarly to a national passport is another common challenge for many displaced individuals attempting to navigate the international job market or study abroad. By addressing these challenges, it will be possible to transform the lives of more refugees while also offering a positive contribution to hosting countries facing skill shortages and demographic shifts.

Despite the limitations of the data collected in

this exercise, the findings featured in this report provide an indicative picture of the expansion of complementary pathways and family reunification globally. As highlighted in previous editions of this report, the available mechanisms to collect and analyse data on refugee access to complementary pathways need to be further improved. This study is possible due to well-established standardized data collection processes across OECD countries and Brazil. The expansion to other countries and the inclusion of more nationalities in addition to the seven selected populations is being explored and would be recommended for future editions. By continuing to increase the quality and scope of available data, this can better inform and guide actors in evidence-based decision-making and increase access to safe pathways for refugees.

“ Refugee family reunification stands as a cornerstone for [...] well-being among displaced communities. However, bureaucracy and protracted processing periods often amplify the hurdles families must overcome, resulting in profound psychological and emotional turmoil. Having personally experienced years of separation from my father and siblings, I can attest to the distress, anxiety, and anguish it engenders. The presence of family members not only fortifies one’s resilience but also enhances overall happiness. It’s imperative to streamline the reunification process to alleviate further suffering and foster healing within refugee families, promoting a brighter, more cohesive future. ”

Aresu, refugee activist from Afghanistan

Sweden	Complies with the definition.	Complies with the definition.	Complies with the definition.	Swedish Migration Agency.
Switzerland	Excludes apprenticeship programmes (until 2017).	Complies with the definition.	Excludes family members of refugees who reunite (at a later stage) with a beneficiary of subsidiary protection.	Secrétariat d'Etat aux migrations SEM, Département fédéral de justice et police DFJP.
Türkiye	No comparable data available	No comparable data available	No comparable data available	
United Kingdom	Complies with the definition.	Complies with the definition.	'Family' includes family visas, dependants joining or accompanying primary applicants and those joining via the EEA Family Permit Scheme.	Home Office, Immigration statistics data tables, Table Vis_D02: Outcomes of applications for entry clearance visas
United States	<p>Visa issuance statistics (F-1, F-3, M-1, M-3). May not delineate between first permits and renewals. Values < 3 suppressed to maintain anonymity-- to avoid underestimation, such values were assigned an average value of 2 by OECD.</p>	<p>Visa issuance statistics (CW-1, H-1B, H-1B1, H-1C, H-2A, H-2B, H-3, O-1, O-2, P-1, P-2, P-3, Q-1, R-1, TN, L-1, E-1, E-2, E-2C, E-3). May not delineate between first permits and renewals. Nonimmigrant work visas are temporary and data are not differentiated between short-term and long-term work permits. For the E-1, E-2, E-2C, and E-3 visas, both the principal applicant and dependent family members receive the same visa category so family members cannot be distinguished. For New Arrival Legal Permanent Residents (LPR) on the basis of Employment, employment categories include Priority workers; Professionals with advanced degrees or aliens of exceptional ability; Skilled workers, professionals, and unskilled workers; Certain special immigrants; and Employment creation (investors). The LPR principal applicants are counted separately from their family members. The dependents of these principal applicants are included in the families of labour-related migrants section (complying with definitions). Values < 3 suppressed to maintain anonymity-- to avoid underestimation, such values were assigned an average value of 2 by OECD.</p>	<p>Visa issuance statistics (lawful permanent residence: family-sponsored preferences and immediate relatives of U.S. citizens; fiancés K-1; accompanying family of labour-related migrants: CW-2, H-4, O-3, P-4, R-2, TD, L-2; accompanying family of students: F-2, M-2, J-2); Families of employment based LPR immigrants from DHS LPR data. Excludes changes of status. Includes families of refugees and asylees if they received a family-based lawful permanent residence status before entering the United States. New Arrival LPRs: Data are from DHS and only those that entered the U.S. are included in these counts. Values < 3 suppressed to maintain anonymity-- to avoid underestimation, such values were assigned an average value of 2 by OECD.</p>	<p>U.S. Department of State and U.S. Department of Homeland Security Office of Immigration Statistics.</p>
