* The Africa (33) average is not available before 2009 due to missing data in some countries. In 2009, it is calculated based on estimated tax-to-GDP ratios for Chad, Gabon and Nigeria in that year, as data were not available prior to 2010 in these countries. Annual changes are rounded to one decimal place. Due to rounding, sums and differences of reported figures might differ from the actual values.

In the OECD classification the term “taxes” is defined as compulsory unrequited payments to general government. Taxes are unrequited in the sense that benefits provided by government to taxpayers are not normally in proportion to their payments. Non-tax revenues are all other government revenues that are not classified as taxes. For more information, see https://www.oecd.org/tax/tax-policy/oecd-classification-taxes-interpretative-guide.pdf.
