

Taxing Wages - the Czech Republic

Tax on labour income

The **tax wedge** is a measure of the tax on labour income, which includes the tax paid by both the employee and the employer.

TAX WEDGE ON LABOUR INCOME

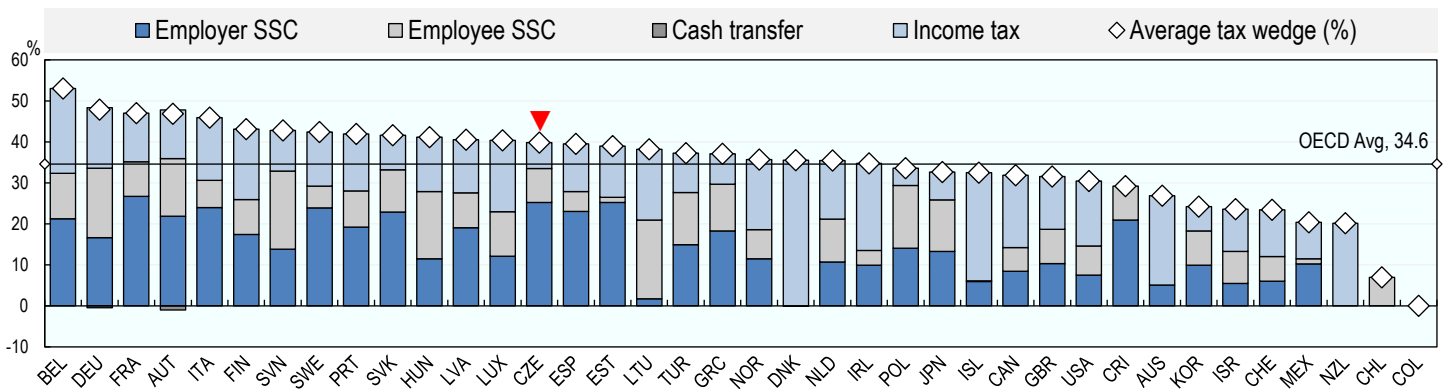

$$\frac{((\text{Personal income tax} + \text{employee and employer social security contributions (SSCs)}) - \text{Family Benefits})}{(\text{Total labour costs (gross wages} + \text{employer SSCs)})}$$

Single worker

The tax wedge for the average single worker in the Czech Republic decreased by 0.2 percentage points from 40.0% in 2021 to 39.8% in 2022. The OECD average tax wedge in 2022 was 34.6% (2021, 34.6%). In 2022, the Czech Republic had the 14th highest tax wedge among the 38 OECD member countries, compared with 13th in 2021.

» In the Czech Republic, income tax and employer social security contributions combine to account for 79% of the total tax wedge, compared with 77% of the total OECD average tax wedge.

Average tax wedge: average single worker, no children

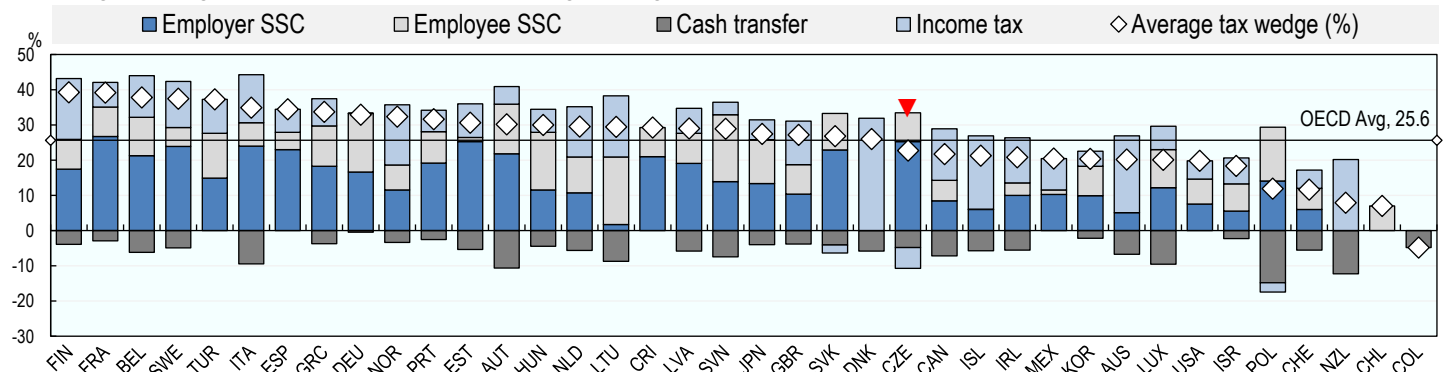

One-earner married couple with two children

The tax wedge for a worker with children may be lower than for a worker on the same income without children, since most OECD countries provide benefits to families with children through cash transfers and preferential tax provisions.

» The Czech Republic had the 24th lowest tax wedge in the OECD for an average married worker with two children at 22.7% in 2022, which compares with the OECD average of 25.6%. The country occupied the same position in 2021.

Child related benefits and tax provisions tend to reduce the tax wedge for workers with children compared with the average single worker. In the Czech Republic in 2022, this reduction (17.1 percentage points) was greater than the OECD average (8.9 percentage points).

Average tax wedge: One-earner married couple at average earnings, 2 children

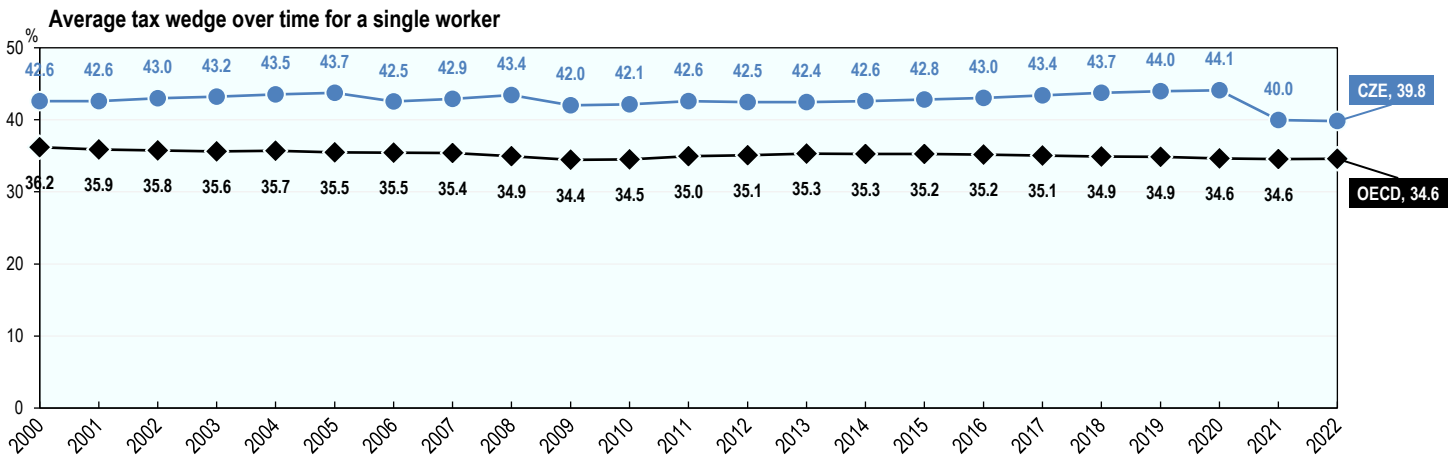

Tax wedge trends between 2000 and 2022

In the Czech Republic, the tax wedge for the average single worker decreased by 2.8 percentage points from 42.6% to 39.8% between 2000 and 2022. During the same period, the average tax wedge across the OECD decreased by 1.6 percentage points from 36.2% to 34.6%.

Between 2009 and 2022, the tax wedge for the average single worker decreased by 2.2 percentage points in the Czech Republic. During this same period, the tax wedge for the average single worker across the OECD increased slowly to 35.3% in 2013 and 2014 before decreasing back to 34.6% in 2022.

Employee tax on labour income

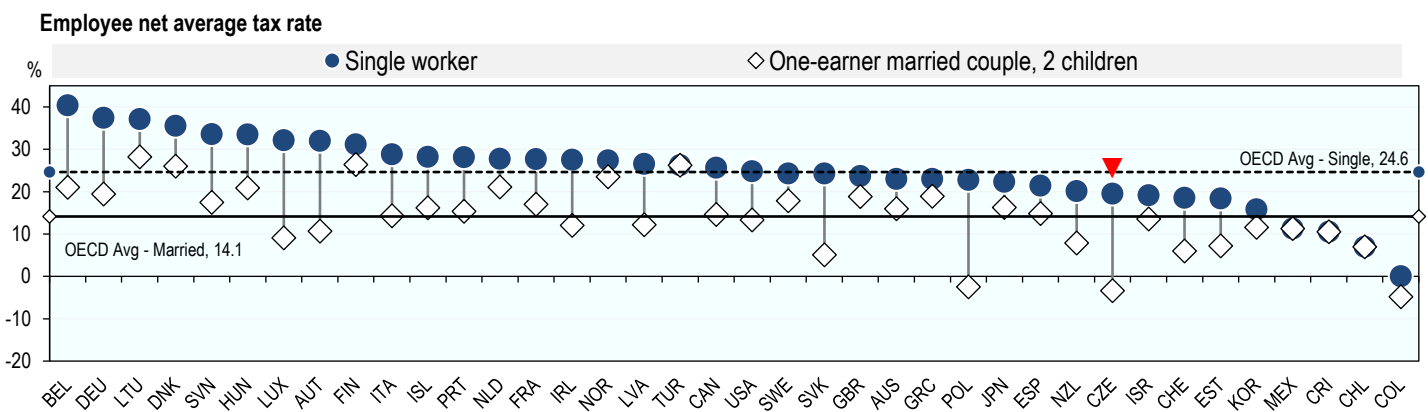

The employee net average tax rate is a measure of the net tax on labour income paid directly by the employee.

EMPLOYEE NET AVERAGE TAX RATE

$$\frac{(\text{Employee personal income tax and employee social security contributions}) - \text{Family Benefits}}{\text{Gross wages}}$$

In the Czech Republic, the average single worker faced a net average tax rate of 19.5% in 2022, compared with the OECD average of 24.6%. In other words, in the Czech Republic the take-home pay of an average single worker, after tax and benefits, was 80.5% of their gross wage, compared with the OECD average of 75.4%.

Taking into account child related benefits and tax provisions, the employee net average tax rate for an average married worker with two children in the Czech Republic was -3.4% in 2022, which is the 37th lowest in the OECD, and compares with 14.1% for the OECD average. This means that an average married worker with two children in the Czech Republic had a take-home pay, after tax and family benefits, of 103.4% of their gross wage, compared to 85.9% for the OECD average.
